## I. INTRODUCTION

---

### **ABOUT TEMPLE UNIVERSITY HOSPITAL**

Temple University Hospital was founded in 1892 as “Samaritan Hospital,” with the mission of caring for patients with limited incomes and ensuring access to medical care in its surrounding neighborhoods. Today, Temple University Hospital is a 714-bed non-profit acute care hospital that provides a comprehensive range of medical services to its North Philadelphia neighborhoods, as well as a broad spectrum of secondary, tertiary, and quaternary care to patients throughout Southeastern Pennsylvania.

As the chief clinical training site for the Temple University School of Medicine, Temple University Hospital plays a critical role serving the healthcare needs of some of the Commonwealth’s most vulnerable communities. Last year, Temple University Hospital discharged 28,000 patients, registered 324,000 outpatients, and cared for 125,000 emergency department visitors. Temple University Hospital is the only Level I Trauma Center in Southeast Pennsylvania with an adult burn unit. Its Episcopal Campus, which houses all of our behavioral health services, handles more than 10,000 Crisis Response Center visits annually.

Temple University Hospital is an indispensable provider of health care in the largest American city without a public hospital. About 85% of its patients are covered by government programs, including about 31% by Medicare and 53% by Medicaid. Among Pennsylvania’s full-service safety-net providers, Temple University Hospital serves the greatest volume and highest percentage of Medicaid patients. Temple’s obstetrical services delivers about 3,500 infants annually, of which Medicaid covers nearly 90%.

Temple University Hospital is located in a federally designated Medically *Underserved Area*. Its Episcopal Campus is also located in a *Federal Empowerment Zone*. About 83% of the population in Temple’s service area is African American, Latino or other minorities. While Temple University Hospital serves patients from throughout the region, about 37% of families with children in Temple’s primary service area live below the federal poverty level.

Temple University Hospital is a member of the Temple University Health System, which also includes Jeanes Hospital and the Hospital of the Fox Chase Cancer Center. Temple University Hospital is staffed by 400 employed physicians of the Temple University School of Medicine’s practice plan. Temple University Physicians represents 17 academic departments including subspecialties in emergency medicine, family practice and pediatrics, cardiology, gastroenterology, oncology, obstetrics and gynecology, orthopedics, neurosurgery, neurology, general and specialty surgery, and psychiatry. All Temple physicians care for patients covered by Medicaid in both the inpatient and outpatient settings.

## **PURPOSE AND METHODOLOGY**

This report summarizes the results of an assessment of the health status and health care needs of residents of the Temple University Hospital service area. The needs assessment was conducted by Public Health Management Corporation, a private non-profit public health institute. The purpose of the needs assessment is to identify and prioritize community health needs so that the hospital can develop strategies and implementation plans that benefit the public as well as satisfy the requirements of the Affordable Care Act.

This introduction includes a definition of the community assessed in the report, the demographic and socioeconomic characteristics of the residents, and the existing health care resources followed by II. Needs Assessment Process and Methods; III. Findings; and IV. Unmet Community Health Needs. Tables, maps, and a list of community members who participated in the needs assessment are included in the Appendices.

Quantitative information from the U.S. Census, Pennsylvania Department of Health vital statistics, and the Southeastern Pennsylvania Household Health Survey was analyzed for the hospital's service area using the Statistical Program for Social Sciences (SPSS). Frequency distributions were produced for variables for multiple years of data so trends over time could be identified and described. The unmet health care needs for this service area were identified and prioritized by comparing the health status, access to care, health behaviors, and utilization of services for residents of the service area to results for the county and state and the Healthy People 2020 goals for the nation. In addition, for Household Health Survey measures, tests of significance were conducted to identify and prioritize unmet needs.

PHMC also collaborated with the participating hospitals to identify individuals living and/or working in the communities in the hospitals' service areas who could provide input to the needs assessment as community members, public health experts, and as leaders or persons with knowledge of underserved racial minorities, low income residents, and/or the chronically ill. (For a list of the names, titles, organizations, and area of expertise of community meeting participants, see Appendix A). The participating hospitals and PHMC worked together to obtain meeting venues, contact potential participants, and encourage attendance. Meeting participants were not compensated. Input from the community meeting participants, including county and local health department officials and public health experts, was used to further identify and prioritize unmet needs, local problems with access to care, and populations with special health care needs.

Qualitative information from the community meetings was analyzed by identifying and coding themes common to participants, and also themes that were unique. The resulting analysis was organized into major topic areas related to health status, access to care, special population needs, unmet needs, and health care priorities.

### **PUBLIC HEALTH MANAGEMENT CORPORATION QUALIFICATIONS**

Public Health Management Corporation (PHMC) is a 501(c)(3) non-profit corporation that was founded in 1972 to address problems in the organization and delivery of health and social services. PHMC is a nonprofit public health institute that creates and sustains healthier communities and envisions a healthy

community for all. PHMC uses best practices to improve community health through direct service, partnership, innovation, policy, research, technical assistance, and a prepared workforce.

PHMC's Research and Evaluation Group (REG) was uniquely qualified to provide comprehensive CHNA services to DVHC's not-for-profit member hospitals and facilities. It is the only public health institute in Pennsylvania, has many years' experience collaborating with health care stakeholders, and can facilitate the participation of these diverse groups as required by the ACA. PHMC staff are public health experts who have conducted many CHNAs over the past twenty years for hospitals, health departments, foundations, and other non-profits.

A list of community and population assessments PHMC has completed includes:

- Philadelphia Health Care Trust Needs Assessment, 2011
- School District of Philadelphia Head Start Needs Assessment, 2010
- Jewish Federation of Greater Philadelphia Older Adult Needs Assessment, 2010
- Main Line Area Older Adults Needs Assessment, 2010
- William Penn Foundation Youth Development Initiative Population Studies, 2006, 2008, 2010
- National Nursing Centers Consortium Northeast Philadelphia Needs Assessment, 2009
- Latino Youth Needs Assessment, 2009
- National Children's Study Montgomery County Vanguard Center Needs Assessment, 2008
- Planned Parenthood of Bucks County LGBTQ Needs Assessment, 2007
- Project HOME North Philadelphia Needs Assessment, 2006
- Children's Hospital of Philadelphia Early Head Start Needs Assessment, 2003 and 2006
- Philadelphia Corporation for Aging Older Adults Needs Assessment, 2004
- North Penn (Montco) Community Health Special Populations Needs Assessment, 2003
- North Penn (Montco) Community Health Needs Assessment, 2002
- Brandywine Health Foundation Community Needs Assessment, 2002
- Philadelphia Chinatown Health Needs Assessment, 2001
- Philadelphia Latino Community Health Needs Assessment, 2001
- Burlington County, NJ Homeless Veterans Needs Assessment, 2001
- Phoenixville Community Health Foundation Special Populations Needs Assessment, 2000
- American Red Cross (SEPA Chapter) Needs and Impact Assessments, 1999
- Berwick, Pennsylvania Community Health Needs Assessment, 1999
- East Parkside Needs Assessment, 1999
- Phoenixville Community Health Foundation Needs Assessment, 1999
- City of Philadelphia Office of Housing and Community Development Elderly Housing Needs Assessment, 1997
- Presbyterian Foundation Assisted Living Assessment of West Philadelphia, 1997
- Five County (NJ) Elderly Health Needs Assessment, 1997
- Suburban Camden County Health Needs Assessment, 1997
- Bucks County Community Health Needs Assessment - Quantitative Analysis, 1994; Update, 1997
- Cumberland, Gloucester, and Salem Counties Health Needs Assessments, 1996
- Presbyterian Foundation Assisted Living Assessment of South and North Philadelphia, 1996
- Montgomery County Health Department Maternal and Child Health Needs Assessment - quantitative data analysis, 1996
- Haddington Area Needs Assessment, 1996

- Partnership for Community Health in the Lehigh Valley - implementation phase, 1996
- Delaware Valley Health Care Council Regional Health Profile, 1996
- City of Camden Needs Assessment, 1996
- Paoli Memorial Hospital Needs Assessment, 1994
- Northeast Philadelphia Partnership for a Healthier Community - qualitative data analysis, 1994
- Misericordia Hospital Community Health Needs Assessment - 1993
- Crozer-Keystone Health System, Delaware County Needs Assessment - quantitative data analysis, 1993
- Chester County Title V Maternal and Child Health Needs Assessment - 1993
- Chester County Maternal and Child Health Consortium Needs Assessment 1993
- Bucks County Title V Maternal and Child Health Needs Assessment - 1993

PHMC's CHNA qualifications also include the Southeastern Pennsylvania Community Health Data Base ([www.CHDBdata.org](http://www.CHDBdata.org)), which provides an unmatched set of information on local community health needs that can be used to develop focused findings supported by reliable data. These data can also be used in developing priorities and rationales for strategic plans that are ACA compliant.

The biennial SEPA Household Health Survey collects information on more than 13,000 residents (children, adults, and seniors) living in the five-county SEPA region. The survey is the longest running community health survey in the United States, as well as the largest regional surveys of its kind. REG staff Francine Axler and Lisa R. Kleiner are the co-directors of the community health needs assessment.

**Francine Axler, Senior Research Associate.** Since 1989, Francine has been actively involved in the field of public health and health promotion, specifically in the collection and dissemination of health status, health behaviors, and utilization of health services data for residents of Southeastern Pennsylvania. Francine is particularly focused on teaching health and human service providers how to utilize community level health data to develop needed, effective and targeted health promotion programs for vulnerable populations. Francine directs PHMC's Community Health Data Base. She has a degree in sociology and a graduate degree in public health education.

**Lisa Kleiner, Senior Research Associate.** For the past twenty-five years, Lisa has worked on a broad range of evaluation, research, and technical assistance projects. Lisa has conducted and coordinated over 25 population and community needs assessments focusing on older adults, racial/cultural minorities, persons with behavioral health needs, homeless families, maternal and child health and other at-risk groups and communities. In addition to this expertise, Lisa has provided training and technical assistance to over 200 organizations to enable them to build their capacity to define and measure program outcomes and impact, tailoring the technical assistance to the specific needs of the organization and staff. Lisa has a law degree and a graduate degree in social work.

#### Collaborative Process

In February 2011, Delaware Valley Healthcare Council of HAP (DVHC), the membership association for hospitals in the five-county region of southeastern Pennsylvania, established a Community Health Needs Assessment Workgroup to assist hospitals in:

- Understanding Affordable Care Act (ACA) requirements and Internal Revenue Service guidance around community health needs assessments.

- Identifying the best resources, tools, and services for conducting needs assessments.

The Workgroup consisted of representatives from the following collaborating hospitals, health systems, and organizations:

<b>Collaborating Organizations</b>
Abington Health
Aria Health
Bucks County Health Improvement Partnership
The Children's Hospital of Philadelphia
Crozer-Keystone Health System
Einstein Healthcare Network
Holy Redeemer
Jefferson Health System
Magee Rehabilitation Hospital
Main Line Health
Mercy Health System of SEPA
Penn Medicine (UPHS)
St. Mary Medical Center
Temple University Health System

The 24-member workgroup included representatives from 13 hospitals and health systems representing 35 (70 percent) of 48 DVHC-member not-for-profit hospital facilities in Bucks, Chester, Delaware, Montgomery, and Philadelphia Counties. The group held a series of meetings to review ACA requirements with policy experts from the American Hospital Association and consider the types of resources that might be needed to conduct needs assessments.

Under the workgroup’s guidance, DVHC developed a scope of work to define the research services and other resources which hospitals might need to assist them in conducting community health needs assessments. Based on the scope of work, DVHC issued a request for proposal to identify highly qualified research partners who could support hospitals in conducting needs assessments.

After a rigorous evaluation process that included extensive input from workgroup members, Public Health Management Corporation (PHMC) was selected as the most appropriate research partner. PHMC’s selection was due in part to their Community Health Data Base’s in-depth, zip-code-level health information for the five-county region. In addition, many hospitals are familiar with this resource and are or have been database subscribers.

With direction and guidance from the workgroup, DVHC and PHMC then collaborated to develop the overall approach to conducting needs assessments for hospitals wishing to participate in the program. Twenty-seven DVHC member facilities participated in the program, as listed below.

- Abington Memorial Hospital
- Lansdale Hospital
- The Children's Hospital of Philadelphia
- Crozer-Chester Medical Center
- Delaware County Memorial Hospital
- Springfield Hospital
- Taylor Hospital
- Doylestown Hospital
- Eagleville Hospital
- Einstein Medical Center Philadelphia
- Einstein Medical Center Elkins Park
- Einstein Medical Center Montgomery
- MossRehab
- Belmont Behavioral Health Center for Comprehensive Treatment
- Grand View Hospital
- Holy Redeemer Hospital
- Mercy Fitzgerald Hospital
- Mercy Philadelphia Hospital
- Mercy Suburban Hospital
- Nazareth Hospital
- St. Mary Medical Center
- Temple University Hospital
- Jeanes Hospital
- Fox Chase Cancer Center
- Episcopal Hospital
- Hospital of the University of Pennsylvania
- Pennsylvania Hospital
- Penn Presbyterian Medical Center

**COMMUNITY DEFINITION**

Temple University Hospital is located in Philadelphia County. The hospital’s primary service area, from which 75% of discharged patients reside, (2010 Pop. **469,000 residents in 2010**) was defined as the community for the purposes of this assessment. The Temple University Hospital service area includes the following ZIP codes:

<b>Temple University Hospital Service Area</b>
19120, 19121, 19122, 19124, 19125, 19132, 19133, 19134, 19140, 19141, 19144

## COMMUNITY DEMOGRAPHICS

This report includes a description of demographic and socioeconomic characteristics of the residents of Temple University Hospital's service area, as these characteristics are strong indicators of access to health care and good health. Please see Appendix B for all Census data and tables.

### Population Size

**The total population of Temple University Hospital's service area decreased to approximately 469,000 residents in 2010 from 476,800 residents in 2000.**

- The population of the service area is estimated to increase, closer to the 2000 population count, in 2013 (to 475,600 residents) and again in 2018 (485,000 residents).

### *Demographic Characteristics*

#### Age

In Temple University Hospital's service area, **more than one-quarter of residents are between the ages of 0-17 (28%), more than four in ten are 18-44 (41%), nearly one-quarter are 45-64 (23%), and 9% are 65 or older.**

- When comparing to 2000, the service area saw a decrease in the percentage of residents ages 0-17 and an increase in the percentage of those ages 45-64.
- When comparing to Philadelphia County, the service area has a higher percentage of those ages 0-17 and a lower percentage of those ages 65 or older.
- In comparison to the state as a whole, the service area has a higher percentage of younger adults (those ages 0-17 and 18-44).

#### Gender

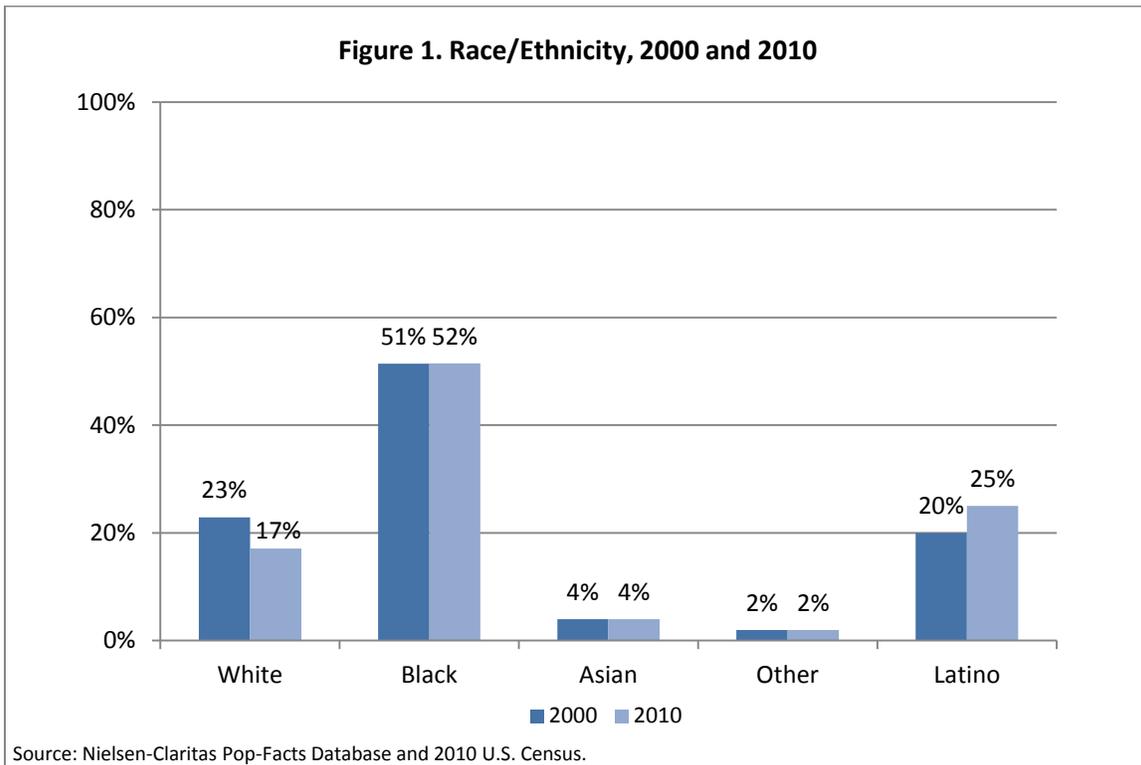

**Approximately 46% of Temple University Hospital's service area is male and 54% is female;** these percentages are projected to remain static through 2018 and are comparable to the gender breakdown of Philadelphia County.

- Pennsylvania has a slightly higher percentage of male residents compared to the service area and Philadelphia County.

#### Race/Ethnicity

In Temple University Hospital's service area, **more than half of residents identify as Black (51%), 17% identify as White, one-quarter identify as Latino (25%), 4% identify as Asian, and 2% identify as an "other" race/ethnicity.**

- The service area saw some changes in the racial/ethnic identity of its population from 2000 with an **increasing percentage of Latino residents.** (Figure 1)
- In comparison to Philadelphia County, the service area has higher percentages of Black residents and Latino residents, and a lower percentage of White residents.
- In addition, the service area has substantially higher percentages of Black and Latino residents when compared to the state as a whole.

### *Latino Origin*

When looking at Latino origin, **service area residents most commonly identify as Puerto Rican (20%)**, followed by residents of an “other” Latino origin (4%), Mexican and Cuban residents (1% or less).

- The percentages of Puerto Rican residents and those who identify as an “other” Latino origin are estimated to continue to increase slightly through 2018.
- The service area has a substantially higher percentage of Puerto Rican residents when compared to Philadelphia County and Pennsylvania overall.

### *Asian Origin*

In Temple University Hospital’s service area, **approximately 4% of residents identify as Asian.**

- **Service area residents most commonly identified as Vietnamese (1%), Chinese (.7%), and Indian and Cambodian (both .5%).**
- When comparing to the county, there is not much variation; however, looking at the state, the service area has higher percentages of Cambodian and Vietnamese residents.

### Language Spoken at Home

**Nearly three-quarters of residents in Temple University Hospital’s service area speak English at home (73%), one-fifth speak Spanish (20%), 4% speak an Asian language, and 4% speak an “other” language.**

- More residents in the service area speak Spanish at home when compared to Philadelphia County and to the state as a whole.

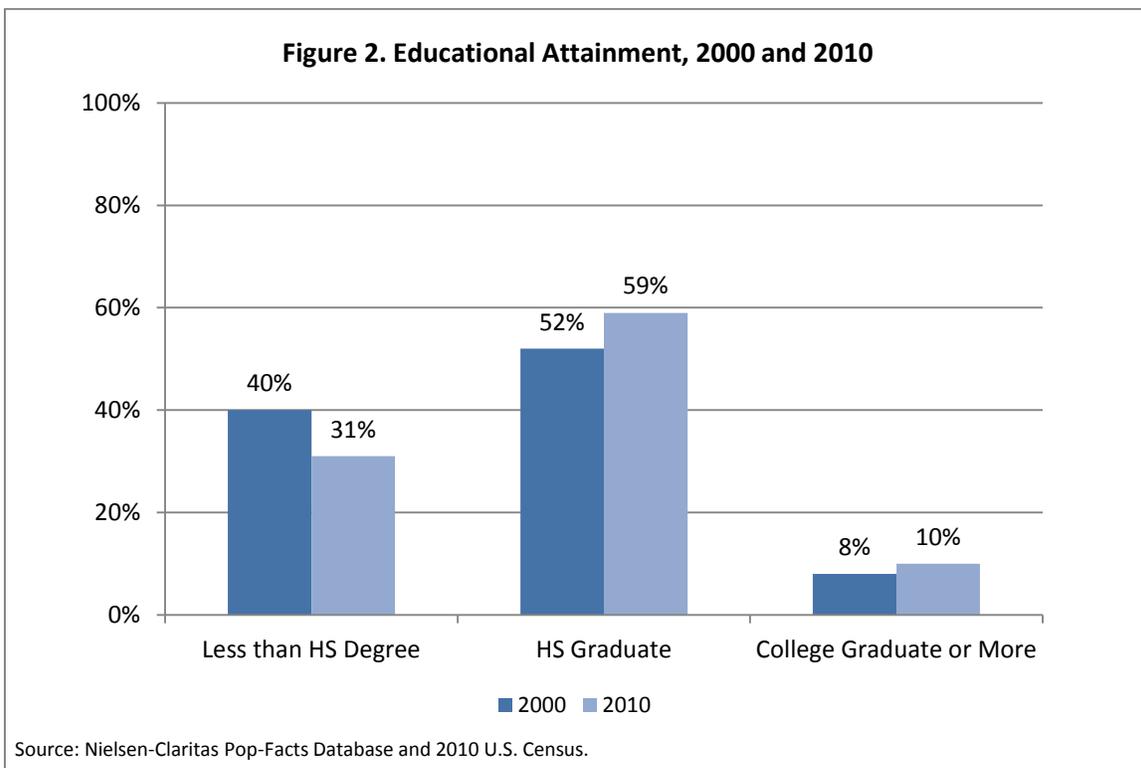

**Socioeconomic Indicators**

Education

In Temple University Hospital’s service area, **three in ten residents have less than a high school degree (31%), six in ten have graduated from high school (59%), and one-tenth have a college degree or more.**

- The service area saw some improvement in educational attainment from 2000. (Figure 2)
- The service area has a higher percentage of residents with less than a high school degree and a lower percentage of those with a college degree or more compared to Philadelphia County.
- Similarly, when compared to the state, the service area has a higher percentage of those with less than a high school degree and lower percentages of those who have a high school degree or a college degree or more.

Employment

**Approximately 85% of Temple University Hospital’s service area residents are employed and 15% are unemployed.**

- The percentage of those who are unemployed is estimated to increase to 20% in 2013.
- In comparison to Philadelphia County and the state, the service area has a higher percentage of unemployed residents.

Poverty Status

When looking at poverty status, **nearly three in ten families without children (29%) and more than one-third of families with children (37%) are living in poverty in Temple University Hospital’s service area.**

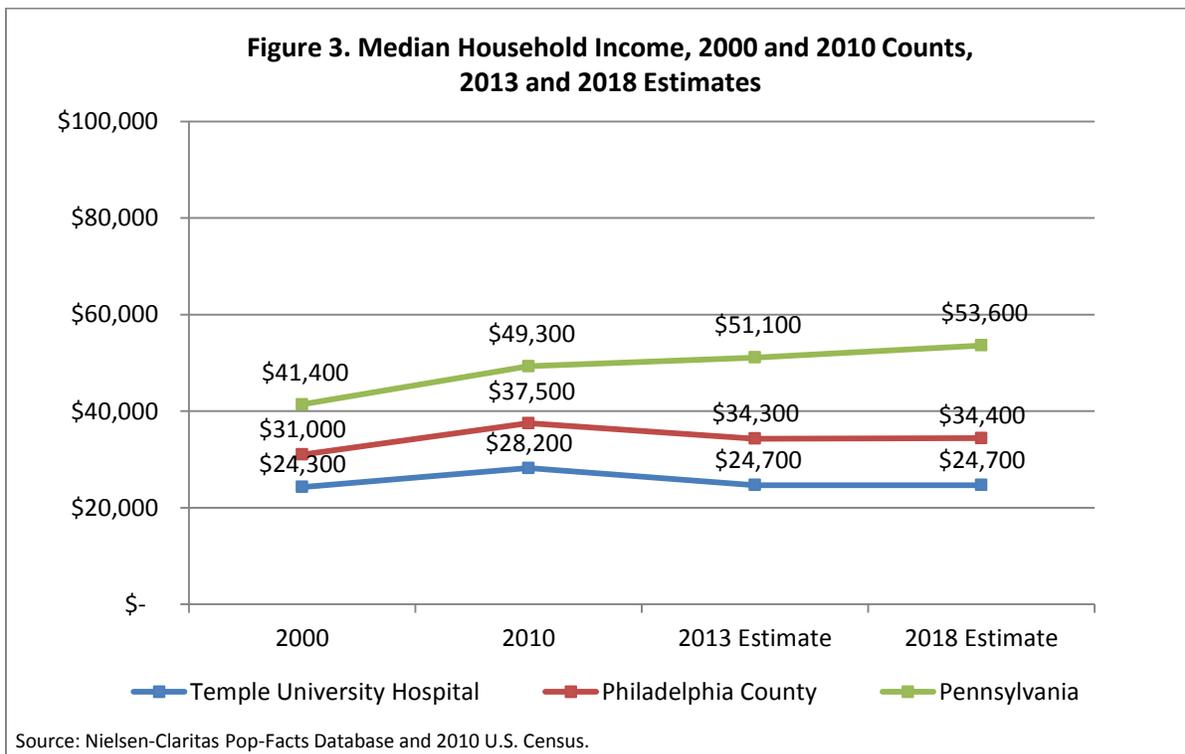

- The percentage of families without children living in poverty more than doubled from 2000.
- Both the percentages of families with children and without children living in poverty are estimated to increase in 2013.
- The service area has a higher percentage of families who are living in poverty (both families with and without children) when compared to Philadelphia County and Pennsylvania overall.

Median Household Income

**The 2000 median household income in Temple University Hospital’s service area was approximately \$24,700, which increased to around \$28,200 in 2010.**

- Although 2010 saw an increase in the median household income, this number is estimated to drop again in 2013.
- The median household income in the service area is substantially lower than that of Philadelphia County and the state. (Figure 3)

Home Ownership

**In Temple University Hospital’s service area, nearly half of residents rent their home (49%) and just more than half own their home (51%).**

- The percentage of residents who rent their home increased from 41% in 2000.
- Also, the percentage of residents who rent their home in the service area is slightly higher than that of Philadelphia County and substantially higher than that of the state as a whole.

## **EXISTING HEALTH CARE RESOURCES**

The existing health and social services in the service area, and for Southeastern Pennsylvania as a whole, were inventoried for this report. Information on health and social services was obtained by internet searches and from the Yellow Pages. Health services included: acute care general hospitals; inpatient psychiatric hospitals and long-term psychiatric facilities; and rehabilitation hospitals. Skilled and intermediate care nursing facilities were not included. Health services also included community health centers and clinics, urgent care centers, and state, city, and county health department service locations. Existing social services which were inventoried included: food pantries, WIC centers, farmer's markets, and soup kitchens; community outpatient mental health and mental retardation services; senior services; social work services; homeless and domestic violence shelters; and YMCA's. These existing health care and social service resources are shown on the Temple University Hospital service area maps in Appendix E. Maps of health care and social service resources are also included for Philadelphia County in Appendix E.

---

## II. NEEDS ASSESSMENT PROCESS AND METHODS

---

The steps in the needs assessment process were: defining the community; identifying existing primary and secondary data and data needs; collecting primary and secondary data; analyzing data; and preparing a written narrative report. The data acquisition and analysis are described in more detail below.

### **DATA ACQUISITION AND ANALYSIS**

Both primary and secondary and quantitative and qualitative data were obtained and analyzed for this needs assessment. Obtaining information from multiple sources, known as triangulation, helps provide context for information and allows researchers to identify results which are consistent across more than one data source.

#### ***Data Sources and Dates***

Quantitative information for this needs assessment was obtained from sources listed below for the most recent years available.

#### **Community Health Needs Assessment Data Sources**

<b>Data Source</b>	<b>Dates</b>
U.S. Census of Population and Housing	2000, 2010
Claritas, Inc. Pop-Facts	2013, 2018
Pennsylvania Department of Health	2005-2008
PHMC Southeastern Pennsylvania Household Health Survey	2010, 2012

#### PHMC Southeastern Pennsylvania Household Health Survey

The 2012 Southeastern Pennsylvania Household Health Survey questionnaire examines health status, utilization of and access to health care among adults and children in the five county area including Bucks, Chester, Delaware, Montgomery and Philadelphia counties. The survey includes many questions which have been administered and tested in national and local health surveys, including items from instruments developed by the following organizations: the National Center for Health Statistics (NCHS) for the National Health Interview Survey (NHIS), The Behavioral Risk Factor Surveillance System (BRFSS), The California Women’s Health Survey, The Social Capital Community Benchmark Survey (Kennedy School of Government, Harvard University) and The Survey on Childhood Obesity (Kaiser Family Foundation/San Jose Mercury News).

The 2012 Household Health Survey was conducted through telephone interviews with people 18 years of age and older living in 10,018 households in Southeastern Pennsylvania. All telephone households within Bucks, Chester, Delaware, Montgomery and Philadelphia counties were eligible to be selected for the sample, as were cell phone users. Households in each of the five counties were selected to guarantee representation from all geographic areas and from all population subgroups. When needed, the interviews were conducted in Spanish. A total of 1,338 interviews were conducted with adults

residing in the service area, including 247 adults age 65 and over and 242 households with a selected child under the age of 18.

The 2012 Southeastern Pennsylvania Household Health Survey was administered for PHMC by Social Science Research Solutions, Inc. (SSRS), a research firm in Media, Pennsylvania, between May and September 2012. All interviews were administered by telephone. Most households (8,009 total) were contacted on home phones (“landlines”) using a computerized Random Digit Dialing (RDD) methodology so that households with unpublished numbers and residents who had recently moved would be included in the sample. A total of 2,009 cell phone interviews were conducted with adults in the five county area. Cell phone respondents received the same survey questionnaire as landline respondents.

The sample for this study was drawn from all telephone households in the five counties. The final sample of interviews is representative of the population in each of the five counties so that the results can be generalized to the populations of these counties. Within each selected household, the Last Birthday Method was used to select the adult respondent for the interview (with the exception of the cell phone sample). In households with more than one eligible adult, the adult who last had a birthday was selected as the adult respondent. In households with children, the person under age 18 who most recently had a birthday was selected for the child interview. The survey incorporates over-samples of people ages 60-74 and 75 and older to provide a sufficient number of interviews for separate analyses of the responses of people in these subgroups.

#### U.S. Census

This report includes data on the population of Temple University Hospital’s service area residents, Philadelphia County residents, and residents of the state, along with along with socio-demographic and socioeconomic characteristics for the years 2000, 2010, 2013 and 2018. Data from the 2000 U.S. Census, the 2010 American Community Survey, and the Nielsen-Claritas Pop-Facts Database were also used. The Nielsen-Claritas Pop-Facts Database uses an internal methodology to calculate and project socio-demographic and socioeconomic characteristics for non-census years, relying on the U.S. Census, the Current Population Survey, and the American Community Survey.

#### Vital Statistics

The most recent information on births, birth outcomes, deaths, and reportable diseases and conditions for residents of the hospital service area and Philadelphia County was obtained from the Pennsylvania Department of Health, Bureau of Health Statistics and Research. Four year (2005-2008) annualized average rates for natality and mortality were calculated by PHMC. Mortality rates were age-adjusted using the Direct Method and the 2000 U.S. standard million population. The most recent (2010) morbidity information was also obtained from the state Department of Health, and rates were calculated by PHMC. Morbidity information, including information on HIV and AIDS cases, is not available at the ZIP code level and, therefore, rates are presented for the county only. The denominators for all 2005-2008 vital statistics rates for the county and state were interpolated from the 2000 and 2010 U.S. Census. The number of women ages 15-44 and the number of adolescents ages 10-17 were also interpolated from the 2000 and 2010 US Census.

## **COMMUNITY REPRESENTATIVES**

Information on the health status and health care needs of the residents of Temple University Hospital's service area was also collected through community meetings with residents, public health representatives, service providers, and advocates knowledgeable about community health. The meetings were guided by a set of written questions. Three meetings were held; two at Temple University Hospital on June 17 and June 18, 2012 and one at its Episcopal Campus on June 16, 2012. Community leaders, providers, public health representatives, and residents participated.

In addition to the meetings held at Temple University Hospital facilities, information on the health status and health needs were obtained by PHMC at four additional meetings held in Philadelphia County. These meetings were held in:

- Center City (PHMC) on July 24, 2012;
- West/Southwest Philadelphia (Boys Latin Charter School) on July 10, 2012;
- Northeast Philadelphia (Holy Family University) on May 30, 2012; and
- Northwest Philadelphia (the York House) on June 26, 2012.

(For complete lists of participant names and agencies from all community meetings, please see Appendix A).

## **INFORMATION GAPS**

Quantitative information for socioeconomic and demographic information, vital statistics, and health was available at the ZIP code cluster level for the service area. To fill potential gaps in information, these data were supplemented by detailed information about the service area obtained from community meetings.

The next section, III. Findings, summarizes the results of the needs assessment process.

---

### III. FINDINGS

---

#### HEALTH NEEDS OF THE COMMUNITY

##### *Health Status*

The health of a community can be assessed by comparing birth outcomes, self-reported health status and health conditions, communicable disease rates, self-reported health concerns and perceptions, and mortality rates to statewide indicators and Healthy People 2020 goals for the nation.

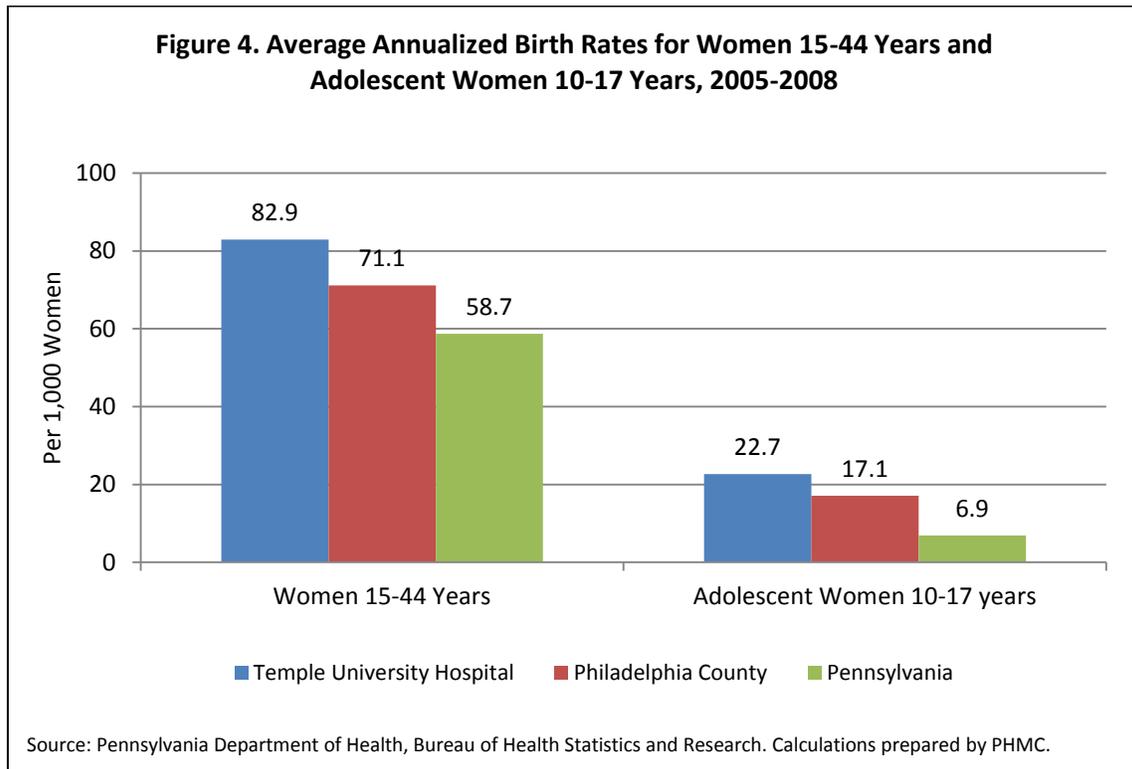

##### Birth Rate

There is an average of 8,600 births annually to women in Temple University Hospital's service area (See Appendix C for the Vital Statistics Tables).

- **The birth rate in the service area (82.9 per 1,000 women 15-44 years of age) is higher than the Philadelphia County rate (71.1) and the Pennsylvania rate (58.7)** (Figure 4).
- Within the service area, Latina women have the highest birth rate (106.0), while White women have the lowest birth rate (48.2). In general, the racial and ethnic birth rate patterns are higher in the service area compared with Philadelphia County and the state.

Teenage pregnancy has been associated with a number of negative birth outcomes, including prematurity and low birth weight, making it an important outcome to track.

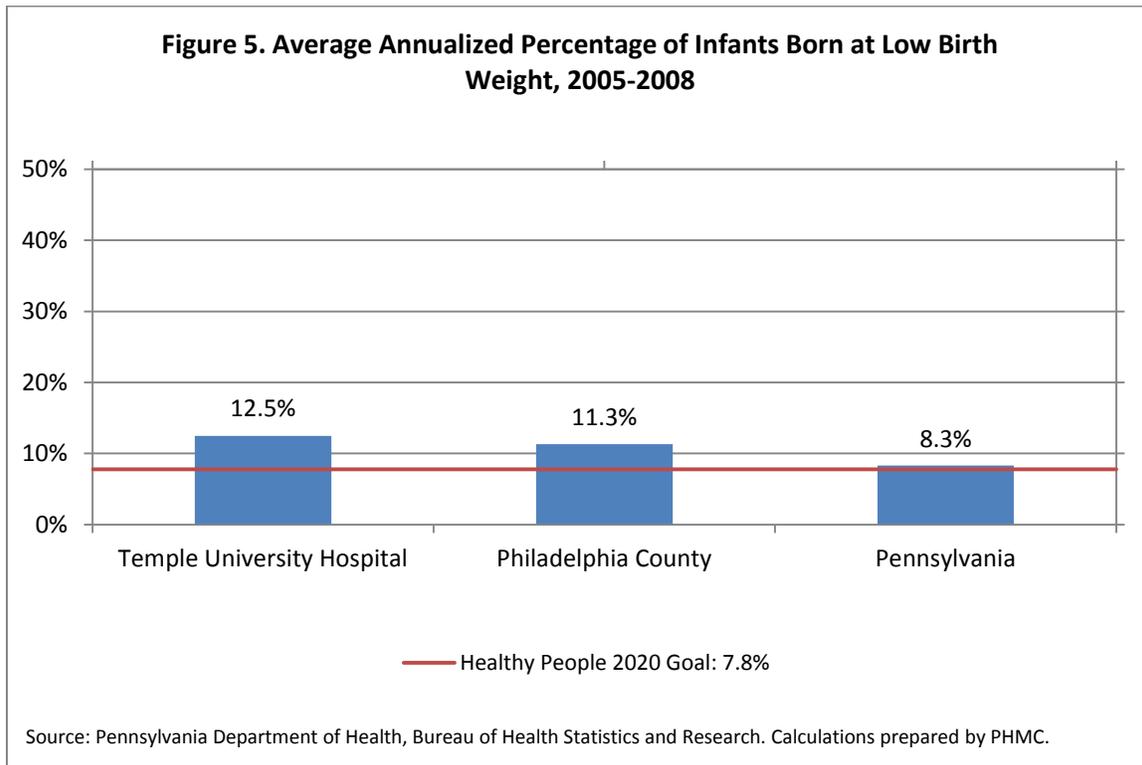

- **In the service area, the adolescent birth rate is 22.7 per 1,000 women 10-17 years of age, which is higher than the Philadelphia County rate (17.1) and three times higher than the state rate (6.9)** (Figure 4).
- Within the service area, the adolescent birth rate is highest for Latina women (31.7) and lowest for White women (8.7). The racial and ethnic adolescent birth rate patterns are generally higher in the service area compared with the county and the state.

#### Low Birth Weight

Low birth weight infants (<2,500 grams or 5lbs 8 ozs.) are at greater risk for dying within the first year of life than infants of normal birth weight.

- **In the service area, 12.5% of infants are low birth weight.** This percentage is comparable with the Philadelphia County average (11.3%), higher than the state average (8.3%), **and has not met the Healthy People 2020 target goal (7.8%)** (Figure 5). The percentage of infants born at low birth weight in the service area represents an annual average of approximately 1,100 infants weighing less than 2,500 grams at birth.
- **In the service area, the percentage of low birth weight infants is highest among Black infants (14.7%)** and lowest for Asian infants (8.1%). In general, the racial and ethnic percentages of infants in the service area who are born at low birth weight are comparable to the county and the state.

### Infant Mortality Rate

**In Temple University Hospital’s service area, every year an average of 100 infants die before their first birthday, representing an infant mortality rate of 11.6 infant deaths per 1,000 live births.**

- The service area’s infant mortality rate is generally comparable with the Philadelphia County rate (12.2) but is slightly higher than the state rate (7.5) and **has not yet met the Healthy People 2020 target goal of 6.0 infant deaths per 1,000 live births.**

### Self-reported Health Status

#### *Fair or Poor Health*

Self-reported health status is one of the best indicators of the population health. This measure has consistently shown to correlate very strongly with mortality rates.<sup>1</sup> In the Temple University Hospital service area, **the majority (70.1%) of adults rates their health as excellent, very good or good** (See Appendix D for Household Health Survey Tables). **However, a sizable percentage (29.9%) of adults is in fair or poor health, representing 103,100 adults.**

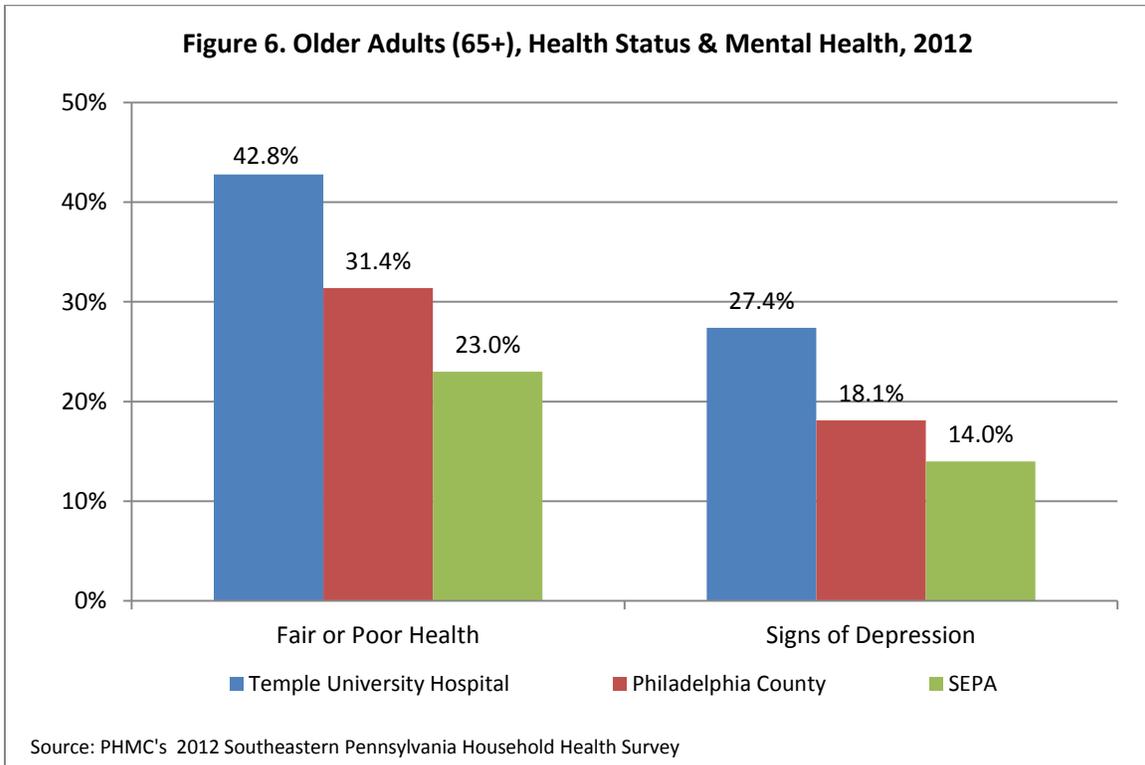

- This percentage is higher than the statewide average<sup>2</sup> (16.8%), the SEPA region (16.1%), and Philadelphia County (22.9%).

<sup>1</sup> Idler EL, Benyamini Y. Self-Rated Health and Mortality: A Review of Twenty-Seven Community Studies. *Journal of Health and Social Behavior*. 1997; 21-37.

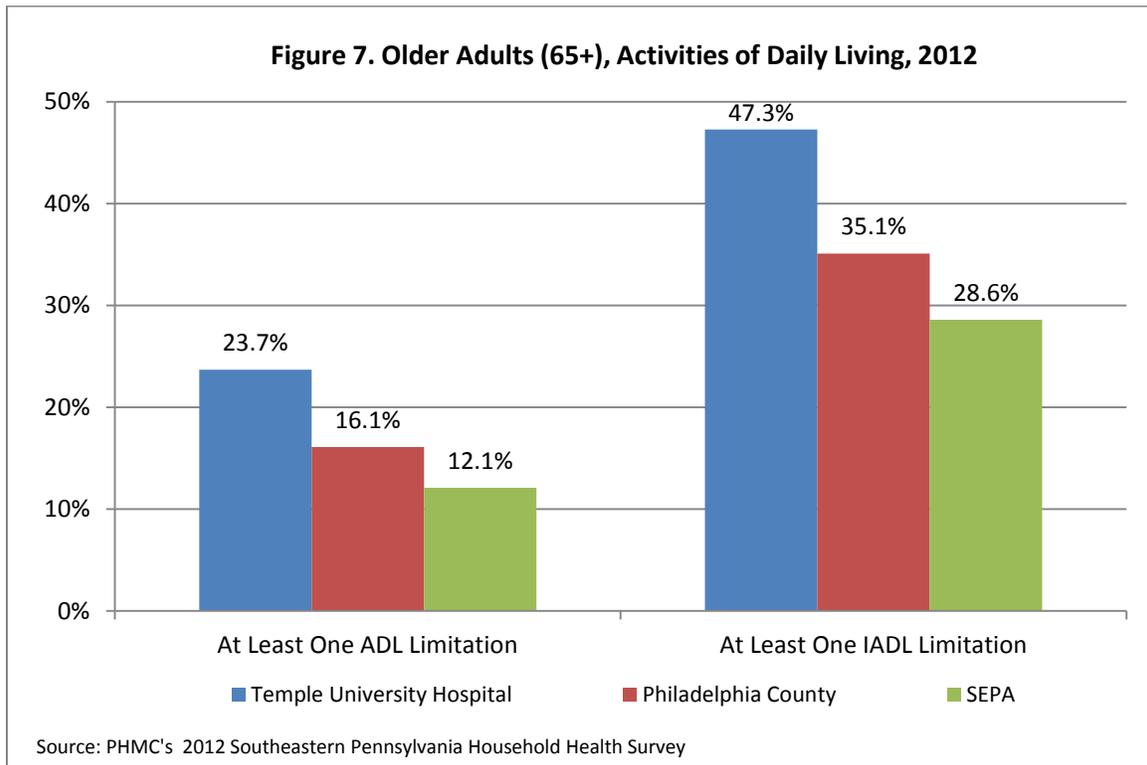

<sup>2</sup> 2011 Behavioral Risks of Pennsylvania Adults, PA Department of Health.

- Among older adults in the service area, 42.8% are in fair or poor health; this percentage represents 19,300 adults 65 years of age and older. The percentage of older adults in fair or poor health has remained steady since 2010. (Figure 6)

- Nearly one-half (47.3%) of older adults have at least one or more instrumental activities of daily living limitations and one in four (23.7%) has at least one or more activities of daily living limitations. (Figure 7)

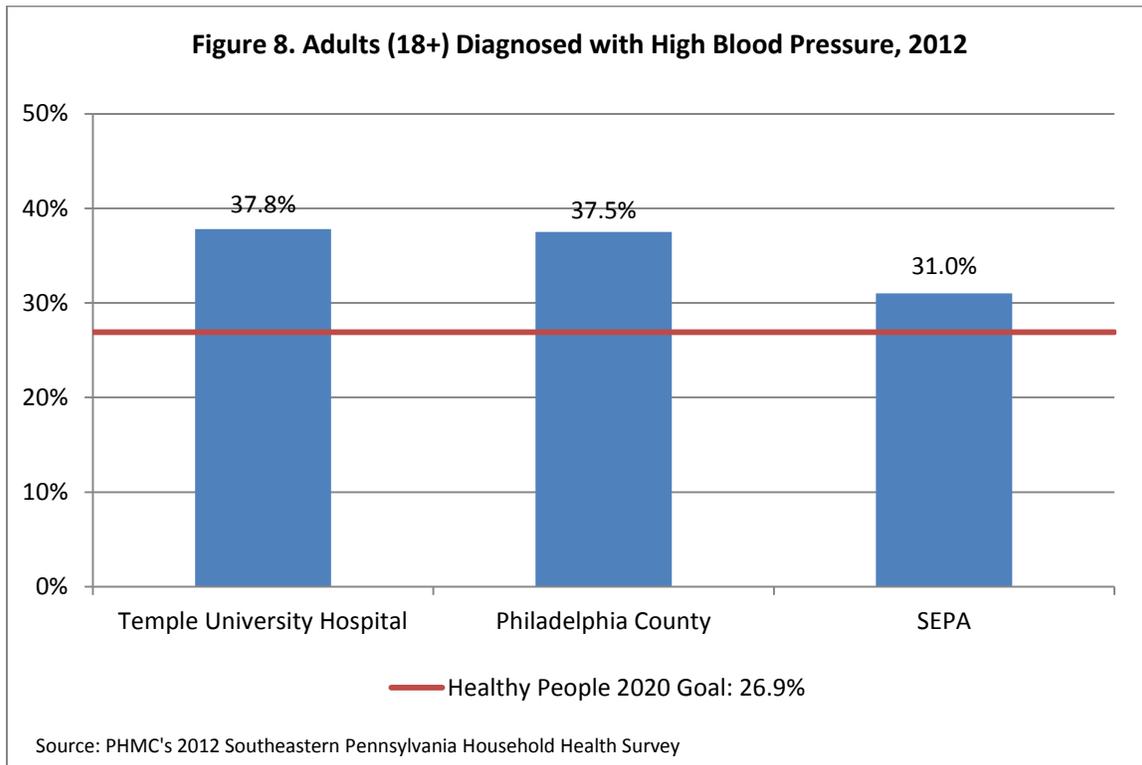

- One in seven (13.2%) children in the service area is in fair or poor health.

#### *Health Conditions*

High blood pressure, diabetes, asthma, cancer, and mental health conditions are common illnesses that require ongoing care. In the service area:

- **More than one-third (37.8%) of adults have been diagnosed with high blood pressure; this represents 130,000 adults.** This percentage has remained constant from 2010 and is higher than the Healthy People 2020 goal of 26.9% of adults with high blood pressure.
- In Pennsylvania, three in ten (31.0%) adults have high blood pressure.<sup>3</sup> The percentage of adults in the service area with high blood pressure is higher than for the region (31%), but is comparable to Philadelphia County (37.5%). (Figure 8)

<sup>3</sup> 2009 Behavioral Risks of Pennsylvania Adults, PA Department of Health.

- **One in five (18.9%) adults in the service area has been diagnosed with diabetes;** this percentage represents approximately 65,400 adults and is considerably higher than the statewide percentage of 9.5% of adults diagnosed with diabetes.<sup>4</sup> **The percentage of adults in the service area with diabetes is also higher than for the region as a whole (12.4%).**

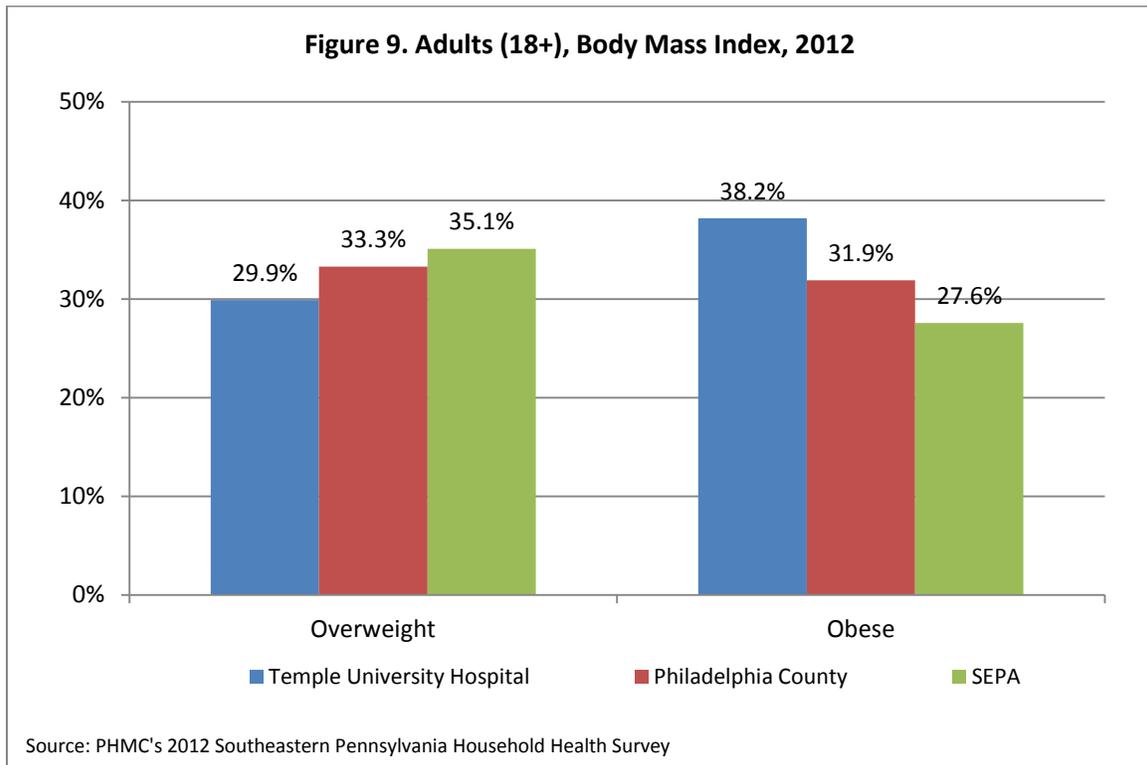

Women in the Temple University Hospital community meetings expressed a **need for better access to services for those suffering from diabetes.** They would like there to be more preventive services, health education classes and workshops in their community focusing on this disease.

- **One in five (21.8%) adults in the service area has asthma.** This percentage is higher than in (12.9%)<sup>5</sup>, SEPA (16%), and Philadelphia County (19.4%).
- Six percent (6.0%) of adults in the service area have had cancer at some point in their lives, representing 20,600 adults. **The percentage of adults who ever had cancer is slightly lower compared to SEPA (8.7%).**
- **Two in five (38.2%) adults in the service area are obese and one in three (29.9%) adults is overweight.** Statewide, 28.6% of adults are obese and 36.0% are overweight.<sup>6</sup> The percentage of adults in the service area who are obese has increased slightly since 2010 from 36.8% to 38.2% in 2012. The Healthy People 2020 goal for adult obesity is 30.6%. (Figure 9)

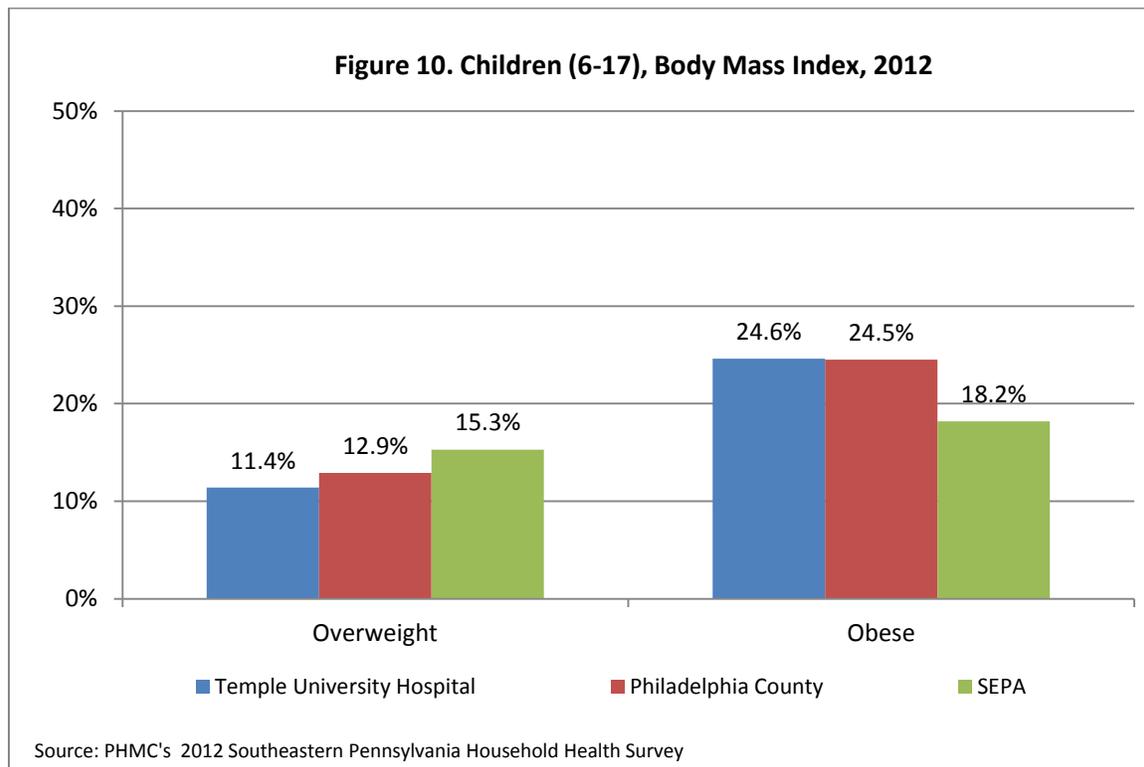

<sup>4</sup> 2011 Behavioral Risks of Pennsylvania Adults, PA Department of Health.

<sup>5</sup> 2011 Behavioral Risks of Pennsylvania Adults, PA Department of Health.

<sup>6</sup> 2011 Behavioral Risks of Pennsylvania Adults, PA Department of Health.

- **Approximately one-quarter (24.6%) of children in the service area are obese and 11.2% are overweight.** The percentage of obese children in the service area is higher than for SEPA as a whole (18.2%). The percentage of obese children in the service area has decreased from 27.1% in 2010 to 24.6% in 2012. (Figure 10)

**Community members expressed concern for youth suffering from obesity.** Additionally, community members believed that there is a need to inform parents of warning signs for **chronic diseases among children**. They stated that it is easier to give children money to purchase their own foods than it is to provide them with a well-balanced meal to eat at school. They believe that there should be education specific to children around nutrition, diabetes and hypertension. They claim that children need to be taught early on what it means to be healthy.

**Temple University Hospital community members would like more access to information/training surrounding dietary needs and nutrition.** Community members felt that obesity, malnutrition and hunger all occur together and cut across age groups. Access to food has become more of a problem for many people with changes in the SNAP benefits; there is now an income requirement.

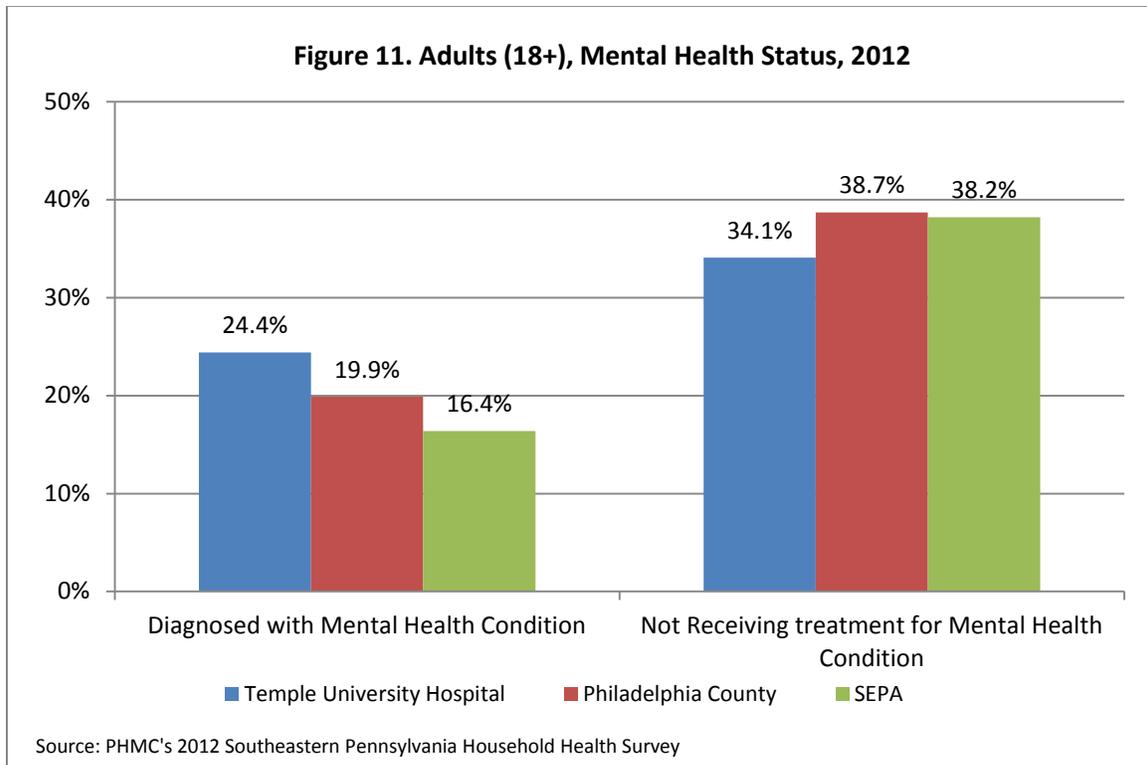

**In addition, community members stated that there are a number of services pertaining to youth that are in high need.** For example, community members expressed a need for better care surrounding pediatric asthma including education on cigarette/marijuana smoking around children. Also, community members indicated that there is a need for better quality nurses/health services in schools as these services are limited.

#### *Mental and Behavioral Health*

- **One in five (24.4%) adults in the service area has been diagnosed with a mental health condition;** this percentage represents 84,300 adults. Of those with a mental health condition, more than one-third (34.1%) is not receiving treatment for the condition. (Figure 11)
  - One in three (27.4%) older adults in the service area has signs of depressions which

are defined as having four or more depression symptom on a ten item scale. This percentage is higher than for the region as a whole (14%).

- Approximately 47,700 adults (13.9%) in the service area are in recovery for a substance abuse problem.

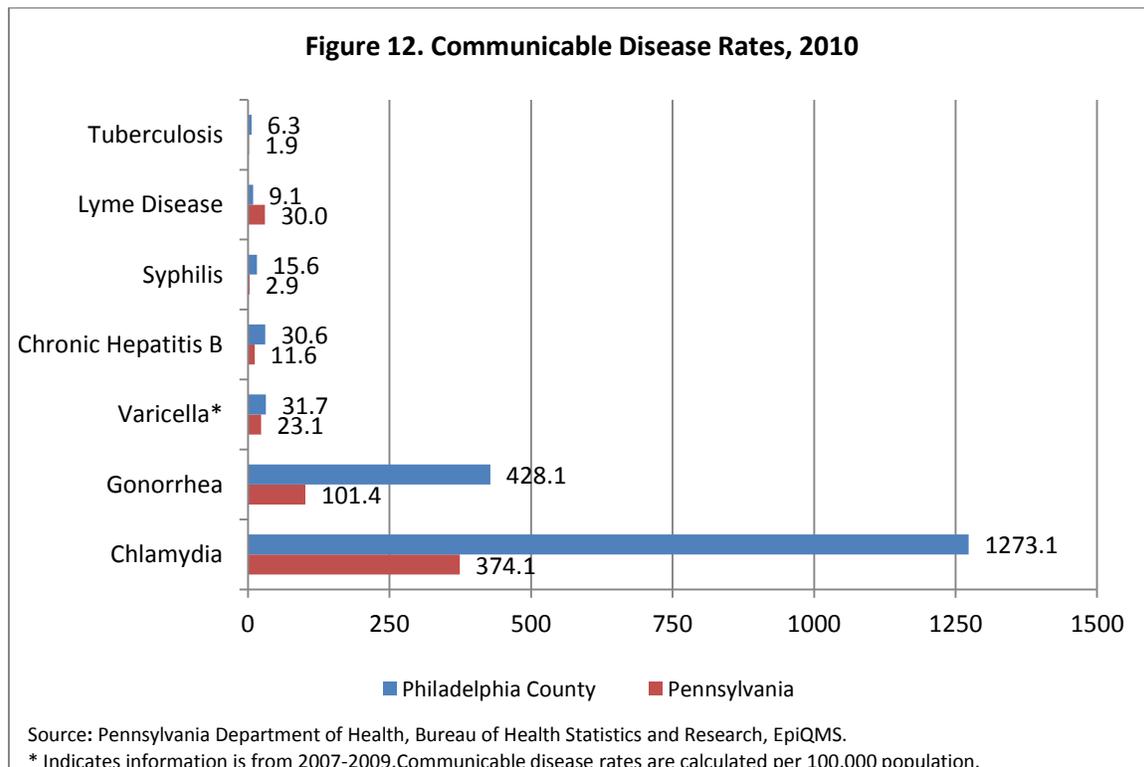

According to Temple University Hospital community members, the lack of mental health services was a **concern for adults and youth.**

- Members of the community expressed that seeking mental health care is especially problematic for the youth. They would like more services for children touched by violence, as this is a need specific to North Philadelphia. There should additionally be increased mental health care and emotional support for children suffering through these traumas.
- Community members are also disappointed at the **long waiting lists for those seeking mental/emotional health care** as there have simultaneously been funding cuts in the Philadelphia School District budgets to address these issues. The parents of youth overcoming these issues are in need of support as well.
- Community participants expressed concern that **older adults, especially older women, suffer from issues relating to isolation and depression.** They say that depression is mostly under diagnosed and untreated. They also experience barriers in seeking mental health care.

### Communicable Diseases

The communicable disease rates for **chronic Hepatitis B, Tuberculosis, Varicella (chicken pox), Chlamydia, Gonorrhea, and Syphilis (primary and secondary)** in Philadelphia County are **higher** than state rates while the county rate for **Lyme Disease** is **lower** compared to the state rate (Figure 12). The county rate for Pertussis (whooping cough) is comparable to the state rate.

### Morbidity

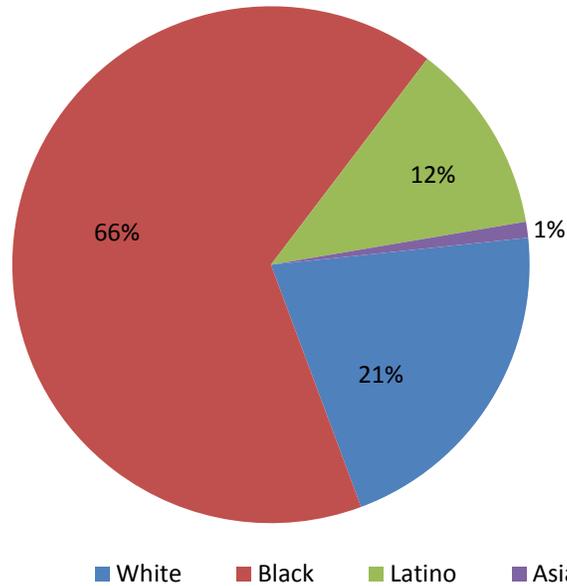

#### *HIV and AIDS*

In Philadelphia County, there are 16,234 individuals who are living with HIV, including AIDS, representing a prevalence rate of 1,121.6 cases per 100,000 population. This prevalence rate is five times higher than the state's rate (244.9).

- Among Philadelphia residents who are living with HIV or AIDS, more than two-thirds (69%) are men.
- Two-thirds (66%) are Black, one-fifth (21%) are White, more than one-tenth (12%) are Latino, and 1% are Asian (Figure 13).

**Figure 13. Racial and Ethnic Distribution of Individuals Living with HIV or AIDS, Philadelphia County, 2008**

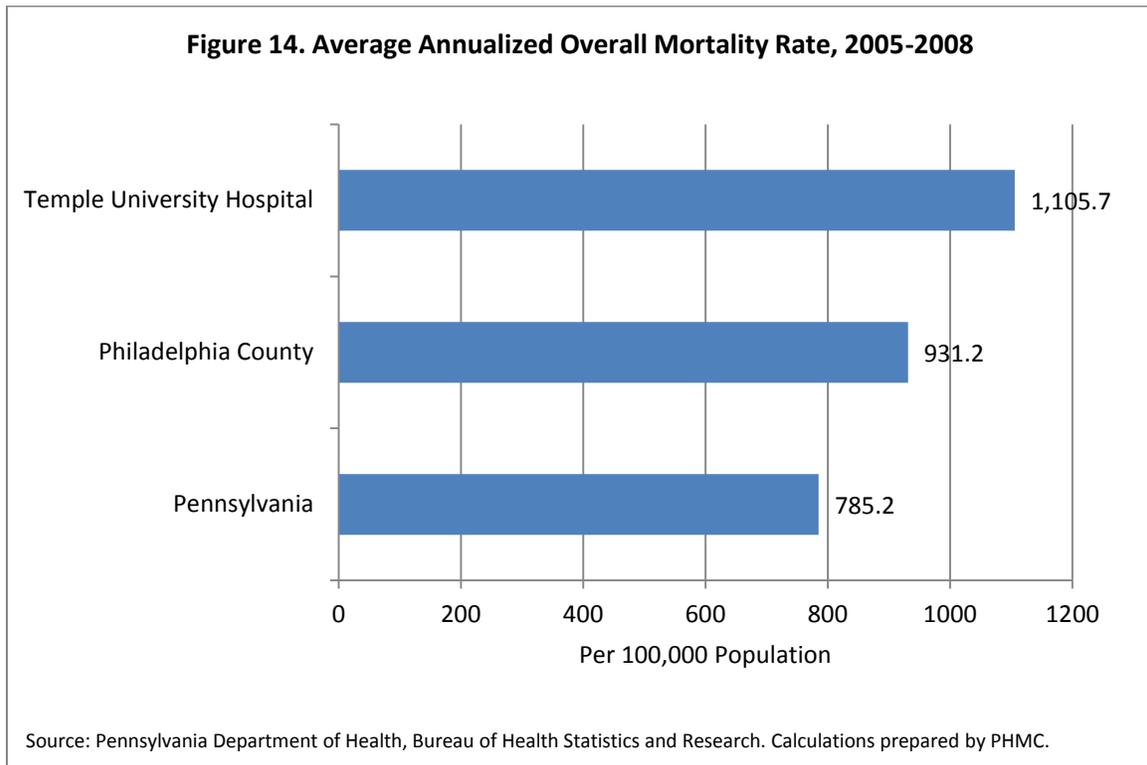

Source: Pennsylvania Department of Health, HIV/AIDS Investigation-Bureau of Epidemiology and American Community Survey.

#### Overall Mortality

**The overall death rate in the Temple University Hospital service area (1,015.7 deaths per 100,000 population) is higher than the Philadelphia County rate (931.2) and the state rate (785.2) (Figure 14).**

- **Heart disease is the leading cause of death in the service area (247.4), the county (232.2), and the state (203.2); but the heart disease death rate is highest in the service area.**
- The other four leading causes of death in the service area are: all forms of cancer (226.7), lung cancer (63.7), stroke (53.0), and female breast cancer (31.6). The death rates for these conditions are higher in the service area compared with the county and the state.
  - Additionally, the service area's homicide rate (35.4) is higher than the countywide rate (24.6) and nearly six times higher than the statewide rate (6.1).

### ***Access and Barriers to Care***

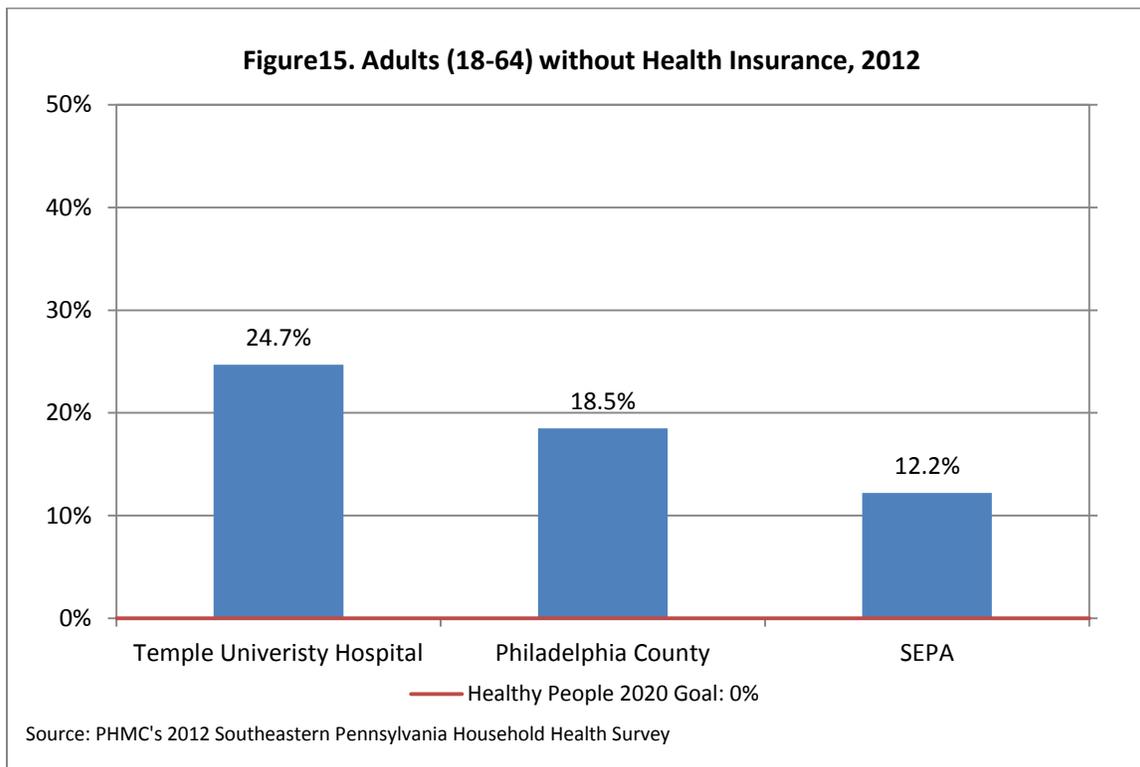

The Healthy People 2020 Goals for access to health care include:

- Increase the proportion of the population with health insurance to **100%**;
- Reduce the proportion of individuals who are unable to obtain or delay in obtaining necessary medical care, dental care or prescription medicines to **9% overall** (4.2% for medical care, 5% for dental care and 2.8% for prescription medications); and
- Increase the proportion of persons with a usual primary care provider to **83.9%**.

#### Health Insurance Status

Having health insurance and a regular place to go when sick are important in ensuring continuity of care over time. The majority of adults (75.3%) in the Temple University Hospital service area have health insurance coverage. However, a sizable percentage of adults do not have any private or public health insurance; **24.7% of adults aged 18-64 in the service area are uninsured, representing 73,200 uninsured adults (Figure 15).**

- The percentage of uninsured adults in the service area has increased **since 2010 from 21.0% to 24.7% in 2012.**
- The percentage of adults in the service area without insurance is higher than for adults ages 18-64 in Philadelphia County (18.5%) and does not meet the Healthy People 2020 goal of 100% of adults with health coverage.

**Community members indicated that the uninsured and underinsured experience significant barriers to care.** This includes both working and non-working individuals who cannot afford to purchase an insurance plan for themselves and who earn too much money to obtain federal insurance coverage.

Community members also indicated that **the uninsured need to know how to access low-cost health insurance and where they can get free care.** One community member expressed concern that you cannot see a specialist if you are uninsured or underinsured. It was also stated that because of insurance restrictions people may have to travel prohibitively far distances to receive care.

#### Prescription Drug Coverage

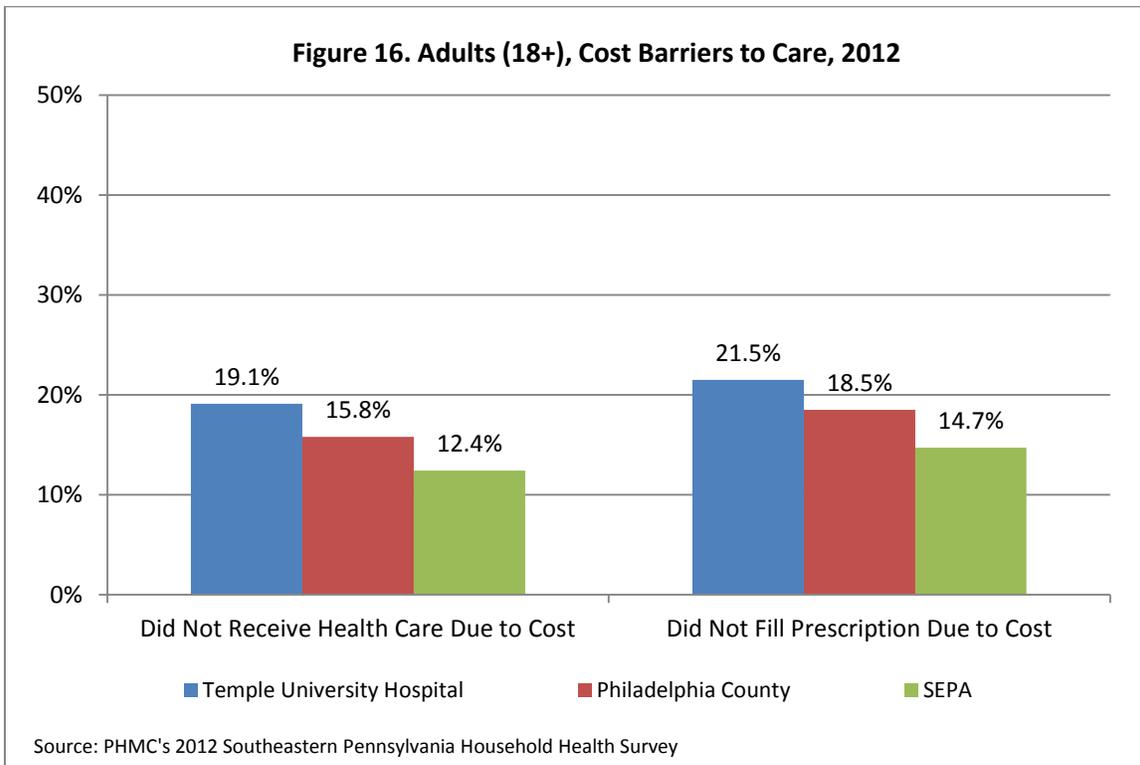

- **One in three (30.5%) adults in the service area does not have prescription drug coverage.** This percentage represents 104,000 adults without this coverage and is higher than compared to the percentage without prescription coverage in 2010; in 2010 13.5% of adults did not have prescription drug coverage.
- The percentage of adults without prescription drug coverage in the service area is higher than in Philadelphia County (24.5%) and in the SEPA region as a whole (18.6%).

#### Economic Barriers

- **With or without health insurance, 65,800 adults in the service area are unable to get needed care due to the cost of that care; 19.1% of adults reported that there was a time in the past year when they needed health care, but did not receive it due to the cost.** (Figure 16)

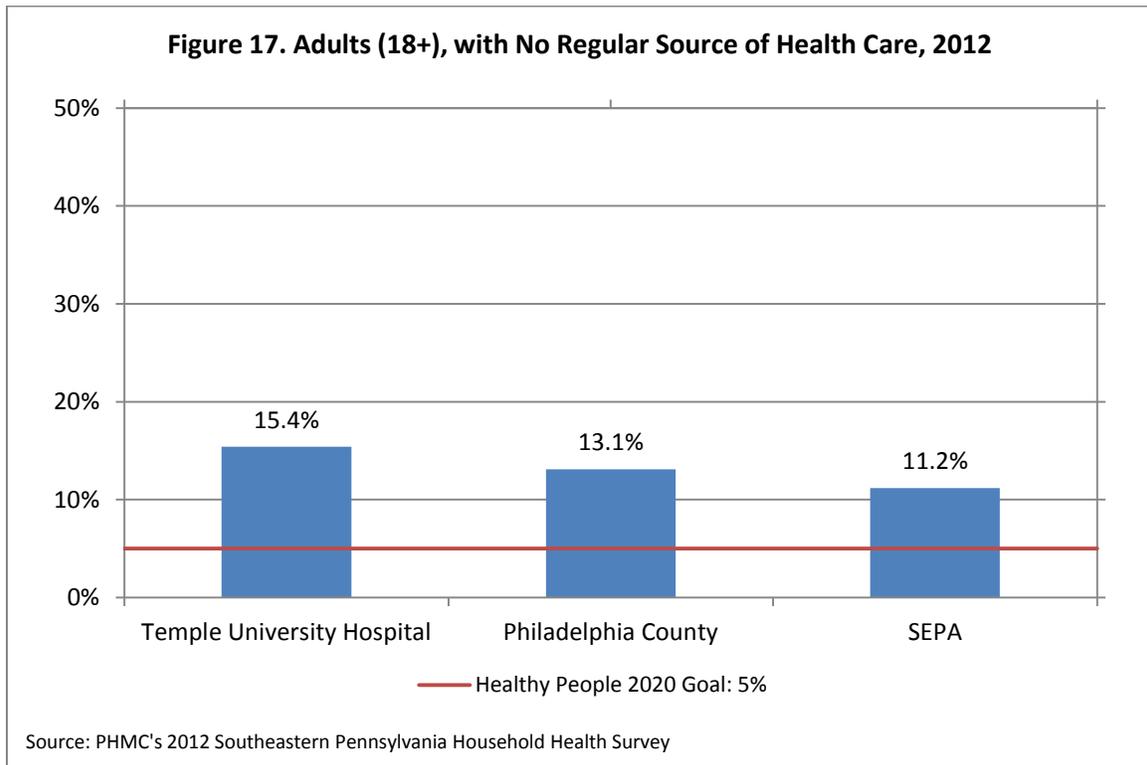

- **About 74,200 adults in service area (21.5%) were prescribed a medication but did not fill the prescription due to cost in the past year.** (Figure 16)
- **One in three (31.9%) adults in the service area in 2010 did not get dental care due to the cost of the visit.** This percentage is higher than for Philadelphia County (26.8%) and SEPA (24.1%) as a whole.

#### Source of Care

Having a regular source of care is important since people who have a regular source of care are more likely to seek care when they are sick compared with those who do not.

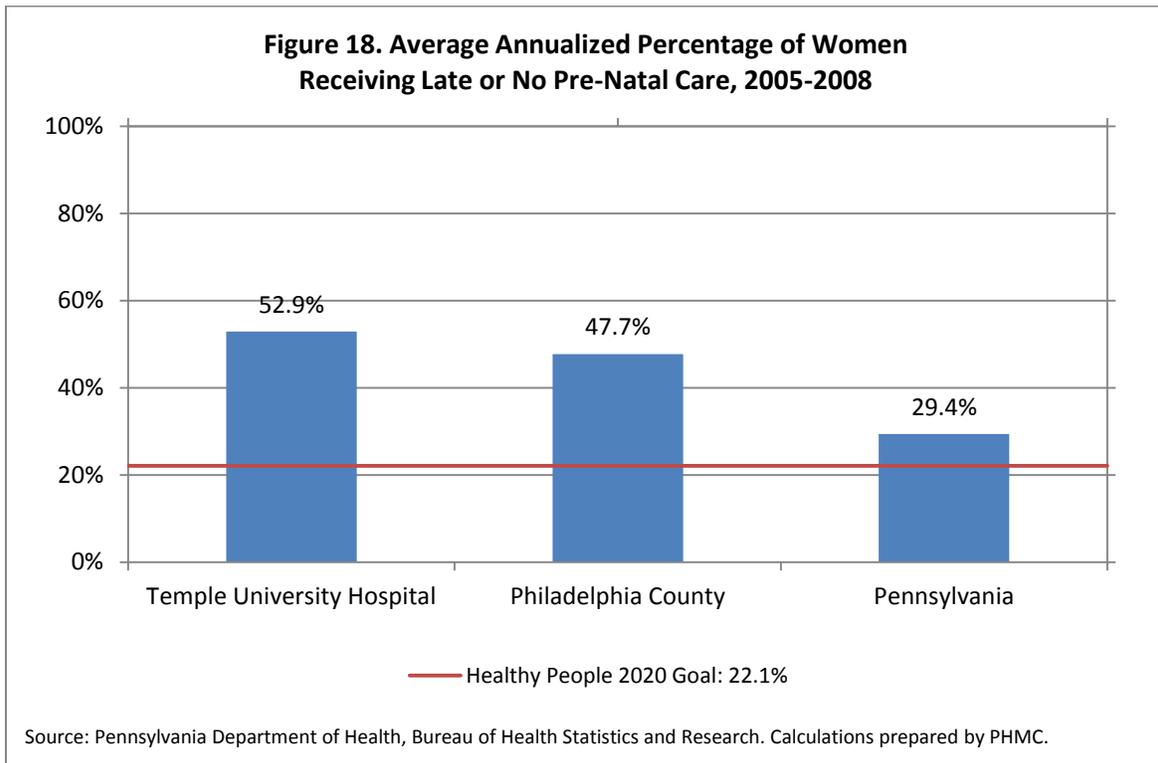

- **In the service area, 15.4% of adults do not have a regular source of care; this percentage represents approximately 53,000 adults (Figure 17).**
- **The percentage of adults in the service area with a regular source of care (84.6%) meets the Healthy People 2020 goal of 83.9%.**
  - Most children (97.5%) in the service area have a regular source of care. However, approximately 3,100 children in the service area do not have a regular source of care.
- While 58.5% of service area adults' usual source of care is a doctor's office, 22.3% usually access health care at a community health clinic and 10.8% usually access care at a hospital outpatient clinic. The remaining 8.4% of adults receive their usual source of care at a hospital emergency room or some other place.

### Pre-Natal Care

Receiving pre-natal care during the first trimester of pregnancy can help ensure that health concerns are identified and addressed in a timely manner.

- **Less than one-half of women in Temple University Hospital's service area (47.1%) receive early pre-natal care**, which is below the Philadelphia County average (52.3%) and far below the state average (70.6%) **and has not met the Healthy People 2020 target goal (77.9%).**
- **In fact, more than one-half of women in the service area (52.9%) receive pre-natal care during the second or third trimester of pregnancy or no pre-natal care at all, representing an average of nearly 4,000 women annually in the service area** (Figure 18).
- More than one-half of Asian women (57.1%) in the service area receive late or no pre-natal care compared to 46.3% of White women. The racial and ethnic percentages of women in the service area receiving late or no pre-natal care are either comparable with or higher than the county and higher than the state averages.

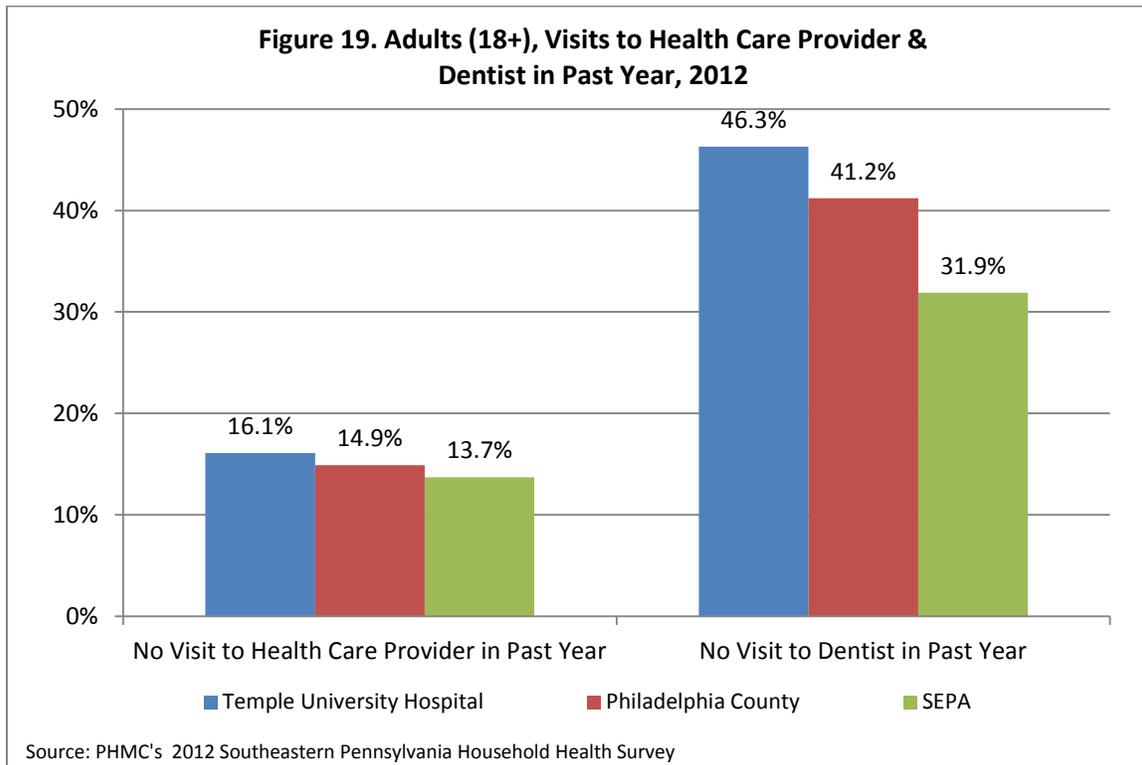

### ***Utilization of Services***

Regular health screenings can help identify health problems before they start. Early detection can improve chances for treatment and cure and help individuals to live longer, healthier lives. **In the service area, more than one in ten (16.1%) adults did not visit a health care provider in the past year; this percentage represents 53,200 adults.** (Figure 19)

#### Dental Visit

- **One in two (46.3%) adults in the service area did not visit a dentist in the past year; this percentage represents 159,000 adults.** This percentage has increased slightly since 2010 (43.8%) and is higher compared to adults in Philadelphia County (41.2%) and the SEPA region as a whole (31.9%). (Figure 19)
- The percentage of adults (46.3%) who did not visit a dentist in 2012 in the **service** area is considerably higher than for adults statewide (29.0%).<sup>7</sup>

<sup>7</sup> 2011 Behavioral Risks of Pennsylvania Adults, PA Department of Health.

- In addition, 8.9% of children in the service area did not visit a dentist in the past year. This percentage is lower compared to children living in Philadelphia (15.1%) County and SEPA as a whole (9.3%).

### Recommended Screenings

The following screenings have been recommended for preventative health for adults. As described below, many adults in the service area are not utilizing these services.

#### *Blood Pressure*

- **12.5% of adults in the service area did not have a blood pressure test in the past year; this percentage represents 43,000 adults.** The percentage of adults who did not have a blood pressure test in the past year in the service area is higher compared to adults in the region (10.4%).

#### *Colonoscopy*

Regular screenings beginning at age 50 are fundamental in preventing colorectal cancer.

- **One in seven (14.6%) adults 50 years of age and older in the service area did not have a colonoscopy in the past ten years.** Statewide, 65% of adults age 50 and over have had a colon cancer screening in the past ten years.<sup>8</sup> The percentage of adults in the service area who did not have a colonoscopy in the past ten years is higher in 2012 compared to 2010 (14.6% versus 10.5%, respectively).

<sup>8</sup> 2010 Behavioral Risks of Pennsylvania Adults, PA Department of Health.

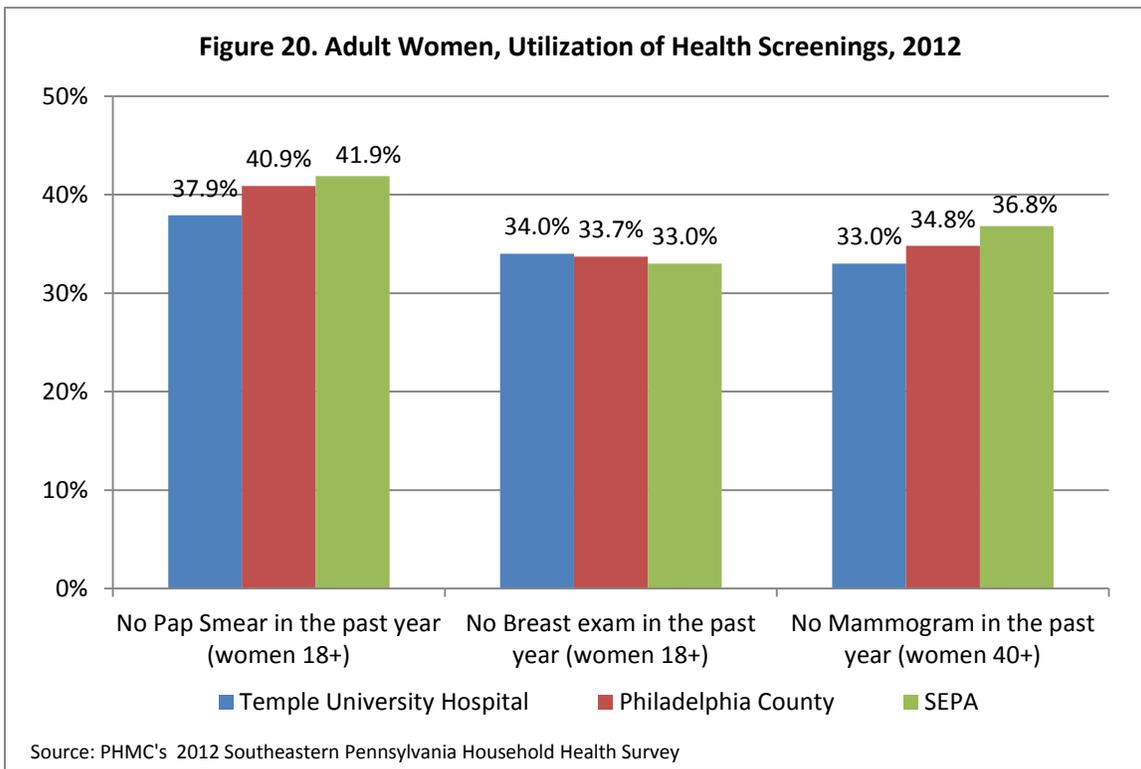

*Pap Smear Test*

- **Nearly one in four (37.9%) women in the service area did not receive a Pap Smear test in the past year.** This percentage represents approximately 75,200 women. The percentage of women who have not received a Pap Smear test in the past year is slightly lower in the service area compared to women in Philadelphia County (40.9%) and for SEPA as a whole (41.9%). (Figure 20)

*Mammogram*

The American Cancer Society recommends annual mammograms beginning at age 40 for women in good health.

- **One third (33.0%) of women age 40 or older in the service area is not receiving this screening annually. This is lower than the statewide percentage (42.0%)<sup>9</sup> and for the region as a whole (36.8%).** (Figure 20)

**Community Members underscore the data by expressing that women need more access to Gynecological and female specific services.** Temple University Hospital community members expressed the need for more access to gynecological services including screenings for ovarian/cervical cancer. Community members believe there should be culturally competent education around health issues, especially for women. They claim that education requires rapport building to gain trust and overcome fears. In addition, many community members noted that violence against women and domestic violence are pressing issues in the community and are related to women’s health.

<sup>9</sup> 2011 Behavioral Risks of Pennsylvania Adults, PA Department of Health.

#### *PSA or Rectal Exams for Prostate Cancer*

- **One-half (51.3%) of men ages 45 years and over in the service area did not have a screening for prostate cancer in the past year.** The percentage of men who have not had a prostate exam in the past year is higher in the service area compared to SEPA as a whole (45.4%). Statewide, 53% of men ages 50 and over did not have this test.

**In addition, community members discussed the need for health education.** They felt that there is increased need for education around receiving cancer screenings and obesity/hypertension/diabetes screenings. Also, community members believe people must be made to realize the importance of receiving preventive screenings. Some community members noted that Einstein/American Diabetes Association provide education about diabetes, but many African Americans don't understand kidney disease.

Many community members thought that parents should be given the tools to properly educate their children and be "good" parents. It was proposed that families could educate themselves together. It was stressed that **health education must be at the appropriate comprehension level for those it is intended to reach**, even for those who are completely illiterate.

#### **Health Behaviors**

##### Nutrition

According to the USDA's MyPlate food guidelines, adults should eat four to five servings of fruits and vegetables daily.<sup>10</sup>

- In the service area, **eight in ten (81.5%) adults do not reach this recommended goal.** Nationally, less than three-quarters of adults (74%) eat three or more servings of fruits and vegetables daily.<sup>11</sup>
- Fast foods are high in unhealthy calories, saturated fats, sugar, and salt. **One-quarter (24.0%) of adults in the service area eats fast food two or more times a week.**

##### Exercise

The U.S. Department of Health and Human Services' 2008 Physical Activity Guidelines for Americans recommends that adults (ages 18-64) get two and a half hours of moderate aerobic physical activity each week.<sup>12</sup>

- One in six (16.1%) of adults in the service area do not participate in any exercise. One-half (50.7%) of adults exercise three or more days a week as recommended. The Healthy People 2020 goal is to reduce the percentage of adults who participate in no leisure time physical activity to 32.6%.

<sup>10</sup> The U.S. Departments of Agriculture, (2011). Dietary Guidelines Consumer Brochure. Retrieved online on October 23, 2012 at <http://www.choosemyplate.gov/food-groups/downloads/MyPlate/DG2010Brochure.pdf>

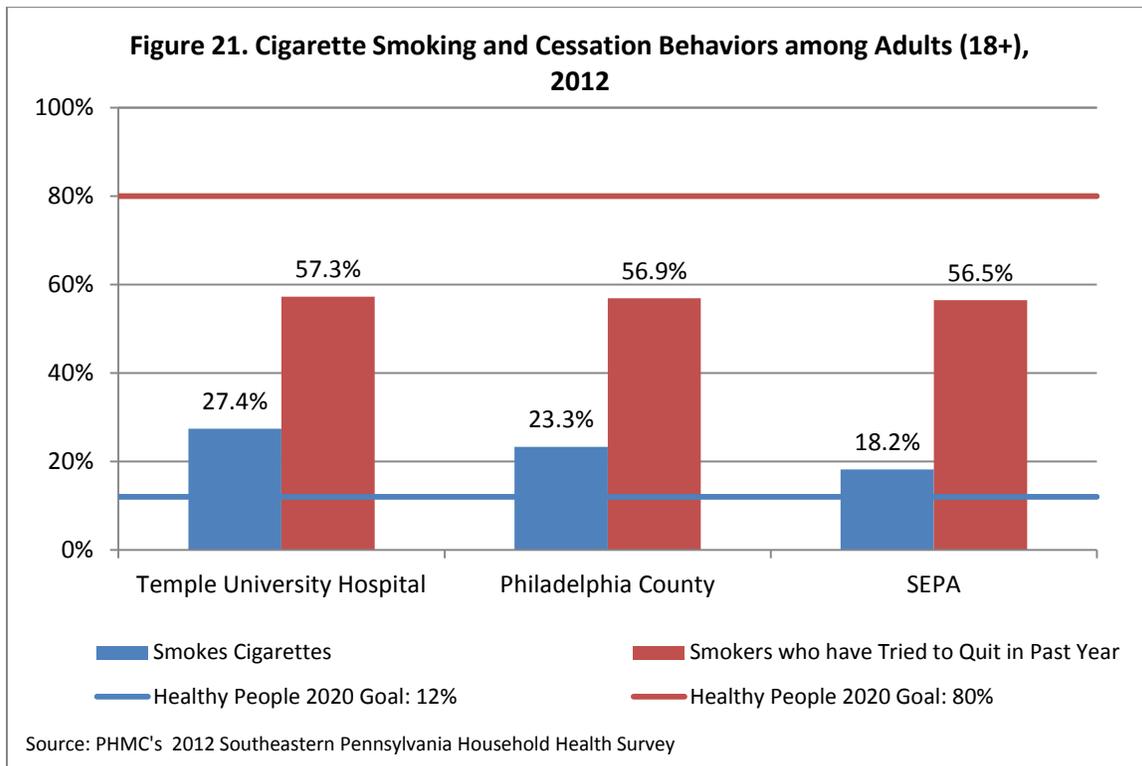

<sup>11</sup> U.S. Centers for Disease Control and Prevention. State-Specific Trends in Fruit and Vegetable Consumption Among Adults, 2000-2009 (2011).

<sup>12</sup> U.S. Department of Health and Human Services. 2008 Physical Activity Guidelines for Americans, 2008.

Tobacco Use

- **One in four (27.4%) adults in service area currently smokes;** this percentage is higher than the smoking rate statewide (22.4%) and for SEPA as a whole (18.2%). (Figure 21)
- The percentage of adults who smoke in the service area does not meet the Healthy People 2020 goal of 12%.<sup>13</sup>
- **Nearly six in ten (57.3%) adults who smoke in the service area tried to quit in the past year.**
- The percentage of adults in the service area who smoke has remained constant since 2010; in 2010, 27.2% of adults smoked cigarettes.

Alcohol Consumption

According to the Centers for Disease Control and Prevention (CDC), binge drinking is a common pattern of excessive alcohol use in the U.S. and is defined as five or more drinks on one occasion.<sup>14</sup>

- **One in three (34.4%) service area adults participated in binge drinking on one or more occasions in the past month.** The binge drinking percentage is higher than the statewide percentage of 18.3%.<sup>15</sup>

<sup>13</sup> 2011 Behavioral Risks of Pennsylvania Adults, PA Department of Health.

<sup>14</sup> U.S. Centers for Disease Control and Prevention. Fact Sheets – Binge Drinking – Alcohol (2010).

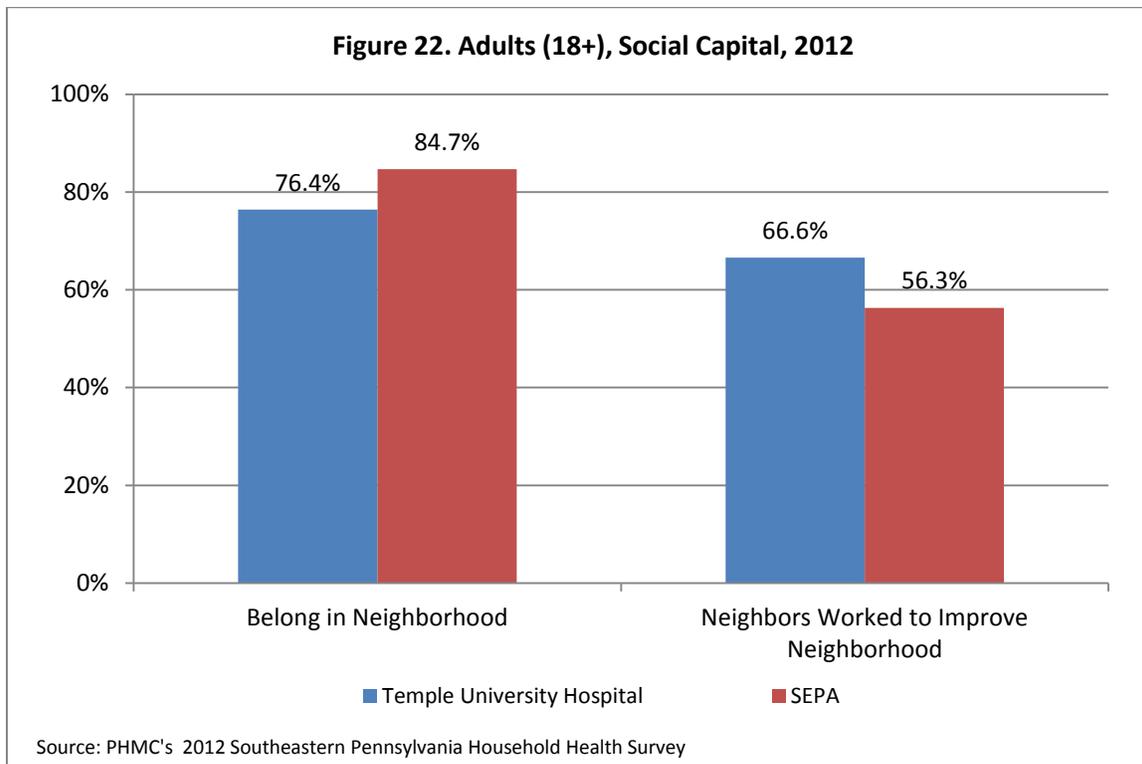

<sup>15</sup> 2011 Behavioral Risks of Pennsylvania Adults, PA Department of Health.

### ***Social Capital and Neighborhood***

Neighborhood factors have important roles in the overall health and well-being of residents. Social capital is one measure used to understand an individual’s neighborhood and role in that neighborhood.

- **The majority (81.7%) of adults in service area feel like they belong in their neighborhood, and three-quarters (73.2%) have worked on a community project to improve the area.** (Figure 22)

### ***Best Methods for Sharing Health Information***

**Community members indicated that word of mouth and working with individuals one-on-one is the best way to address many health concerns in the community.** Community members noted that input from the community is needed before creating programs. This may be difficult as communities are more fragmented than they used to be. People require education that is not passive and meets people where they are.

**Faith based institutions, community organizations/meetings, block captains, schools, educational workshops in the community were mentioned** as ways to disseminate information to the community and there needs to be a sustained relationship with a community based upon connections that already exist in institutions that they trust.

**Several other programs were mentioned as ways to share health information** including The Center in the Park program which teaches people to deal with their diabetes on their own and St. John’s Church

partners to provide prostate screenings, mammograms and host health fairs. The church has over 2,000 members and also has a home visiting program for homebound and hospice patients.

**Patient advocates were also thought to be needed in the community to help people navigate the health care system and not just a resource guide.** Other ways to share information mentioned were:

- Printed media, including community and hospital-based newsletters and ethnic newspapers, including Comcast.
- Electronic media including TV broadcasts (including ethnic channels), public television and the internet/Facebook.
- City health officials/offices

## **HEALTH NEEDS OF SPECIAL POPULATIONS**

One of the goals of this needs assessment is to identify the health needs of special populations across the service area. The following section focuses on the selected health status and access to care needs of special populations in the service area.

### Health Status

- Within the service area nearly four in ten (38%) poor adults living below 150% of the Federal Poverty Level are in fair or poor health compared to 20.3% of non-poor adults. One in three Latino (34.1%) adults is in fair or poor health, followed by 28.8% of Black adults and 25.8% of White adults.
- Poor adults (41.8%) in the service area are more likely to have high blood pressure compared to non-poor (34.1%) adults. In the service area, more than four in ten (44.2%) Black adults have high blood pressure, followed by 36.9% of White adults and 28.6% of Latino adults.
- Poor adults are more likely to have been diagnosed with a mental health condition compared to the non-poor; nearly three in ten (28.8%) of poor adults have been diagnosed with a mental health condition compared to one in seven (14.5%) non-poor adults. Nearly three in ten (28.9%) Latino adults in the service area have been diagnosed with a mental health problem; this percentage is higher than for White (23.4%) and Black (17.6%) adults.
- One third of poor adults (33.3%) smoke cigarettes. Poor adults are more likely to smoke cigarettes compared to non-poor adults (22.7%).

### Insurance Status

- One in four (27.6%) poor adults in the service area is uninsured compared to 19.1% of non-poor adults. Latino adults (30.4%) are more likely to be uninsured than are Black (21.8%) and White (16.6%) adults.

### Other Barriers

The Temple University Hospital and North Philadelphia community members expressed that immigrants and non-English speaking residents of the area suffer from issues surrounding access to care, including Asian Americans and Latinos, especially if they are undocumented and lack coverage. Community

members indicated that **language barriers present obstacles to care** in the non-English speaking immigrant communities. Community members recognize language as a barrier for the Asian/Korean communities specifically as they attempt to access health care. They say the Language Line is ineffective and there are barriers accessing and utilizing interpreters/translators. Additionally, they would like interpreters to be present at each health care facility and for educational materials to be printed in other languages.

## **EXAMINATION OF SPECIAL DATA FOR TEMPLE UNIVERSITY HEALTH SYSTEM**

The following is a brief examination of Temple University Health System inpatient data from January–December 2011. These data are for Temple University Hospital (Main Campus), Episcopal Division – Med/Surg, Temple Rehabilitation and Behavioral Health. These data were provided by Temple University Health System staff for the purpose of providing additional information to assess unmet needs for this community health needs assessment. Tables for these data are located in Appendix F.

- According to Temple University Hospital inpatient data, Temple University hospital had 28,132 inpatient admissions from January–December 2011, Episcopal had 852, Temple Rehab had 330 and Behavioral Health had 2,232. More inpatients were female than male at Temple University Hospital Main Campus (16,411 versus 11,721). There were slightly more females (441) than males (411) admitted to the Episcopal Division, but slightly more males than females admitted to both Temple Rehab (182 males versus 148 females) and at Temple’s Behavioral Health Campus (1,213 males versus 1,018 females).
- The majority of patients at Temple University Hospital were Black (13,878) patients admitted, followed by White (5,906) patients and patients from other ethnic groups (8,348). At the Episcopal Division, there were slightly more White (254) patients admitted than Black (198) patients. At Temple Rehab, more Black (167) patients were admitted compared to White (88) patients. Similarly, more Black patients were admitted to Behavioral Health (1,154) than White (557) patients.

The average patient age differs across the hospitals. The average age for inpatient admissions for Temple University Hospital was 43.9 compared to 54.2 for the Episcopal Division and 60.5 for Temple Rehab. Temple’s Behavioral Health division had an average patient age of 40.2.

- During the time period these data were collected, the mortality rate was 2.3% for Temple University Hospital, 0% for both Episcopal and Temple Rehab, and .1% for Temple’s Behavioral Health division.
- Complication rates represent events that occurred in the hospital. They are deemed to have not been present at the time of admission. The complication rate was 14.1% at Temple University Hospital as compared to an expected rate of 13.6%, representing a deviation from the expected of 0.5%. Complication rates at the Episcopal Division were 1.4%, performing better than expected and the Rehabilitation Unit’s rate was 22.2%, which was a 7.3% deviation.

- The average length of stay was 5.1 days at Temple University Main. The average length of stay at Temple’s Behavioral Health division was 19.8 days, 11.9 days at Temple Rehab and 2.7 days at Episcopal division. The length of stay reflects the complexity of care delivered at each facility. All length of stay comparisons fell into the expected norms for the population served.

---

## IV. UNMET COMMUNITY HEALTH NEEDS

---

### UNMET NEEDS AND IDENTIFICATION PROCESS

The unmet health care needs for this service area were identified and prioritized by comparing the health status, access to care, health behaviors, and utilization of services for residents of the service area to results for the county and state and the Healthy People 2020 goals for the nation. In addition, for Household Health Survey measures, tests of significance were conducted to identify and prioritize unmet needs. Lastly, input from the community meeting participants was also used to further identify and prioritize unmet needs, local problems with access to care, and populations with special health care needs.

- In the Temple University Hospital service area, seven in ten (70.1%) adults rate their health as excellent, very good or good. A sizable percentage (29.9%) of adults are in fair or poor health; this percentage is higher than the statewide average<sup>16</sup> (16.8%), the percentage in fair or poor health for the SEPA region as a whole (16.1%), and the percentage for Philadelphia County (22.9%).
- Heart disease is the leading cause of death in the service area. More than one-third (37.8%) of adults have been diagnosed with high blood pressure and one in five (18.9%) adults in the service area has been diagnosed with diabetes.
- Two in five (38.2%) adults in the service area are obese and one in three (29.9%) adults is overweight. Approximately one-quarter (24.6%) of children in the service area are obese and 11.2% are overweight. The percentage of obese children in the service area is higher than for SEPA as a whole (18.2%).
- One in five (24.4%) adults in the service area has been diagnosed with a mental health condition; this percentage represents 84,300 adults. Of those with a mental health condition, more than one-third (34.1%) is not receiving treatment for the condition.
- A sizable percentage of adults do not have any private or public health insurance; 24.7% of adults aged 18-64 in the service area are uninsured, representing 73,200 uninsured adults

For many SEPA Household Health Survey indicators, the findings for the service area were **statistically significantly worse (p<.01)** than the remainder of SEPA. These indicators could be prioritized for improvement. These areas are:

- Percentage of uninsured adults and adults without prescription drug coverage;
- Overweight or obese adults and children;
- Cigarette smoking and problem drinking among adults;
- Adults and older adults in fair or poor health and with asthma, diabetes and high blood pressure; and

---

<sup>16</sup> 2011 Behavioral Risks of Pennsylvania Adults, PA Department of Health.

- Dental visits among children.

Preliminary analysis of the quantitative and qualitative data collected shows that the unmet health care needs of the residents of this service area include the following prioritized needs:

- Access to primary and preventive care for adults and children, particularly those individuals living in poverty, and who are uninsured or underinsured.
- Access to dental care, prescription coverage for adults and children, and mental health services for women and older adults.

Priority unmet needs in this area also include increased educational programs to address:

- Cultural and language barriers particularly among non-English speakers;
- Heart disease, and cancer management for all residents;
- Smoking prevention, interventions, and cessation programs;
- Overweight and obese children and adults;
- Access to long cost health insurance; and
- Health education about healthy lifestyles and disease management.

Many of these unmet needs are already being addressed in the service area by the hospital, other health care providers, government, and local non-profits. In addition, many of these unmet needs are not within the hospital's mission. This list should be used to assist the hospital in addressing these needs in their needs assessment implementation plan.

## APPENDIX A: COMMUNITY MEETING ATTENDEES

**Temple University Hospital Community Meeting**  
Community Health Needs Assessment  
July 17, 2012  
**List of Participants (7)**

Name	Title	Agency	Email	Phone No.	Area of Expertise

## APPENDIX C: VITAL STATISTICS TABLES

**Table 1: Average Annualized Birth Rates for Women 15-44 Years  
by Race and Ethnicity, 2005-2008**

	Service Area	Philadelphia County	Pennsylvania
	Rate (Number)	Rate (Number)	Rate (Number)
Total	82.9 (8,601)	71.1 (22,759)	58.7 (144,233)
White	48.2 (1,108)	48.9 (6,093)	52.6 (105,608)
Black	78.5 (4,590)	74.9 (11,121)	74.6 (21,237)
Asian	77.9 (297)	72.0 (1,415)	78.8 (5,298)
Other	105.1 (1,950)	110.8 (3,028)	92.6 (8,810)
Latina	106.0 (2,529)	114.0 (3,761)	110.0 (13,040)
Non-Latina	73.1 (5,840)	63.6 (18,255)	55.4 (129,559)

Notes:

The birth rate is calculated per 1,000 women 15-44 years of age.

White, Black, Asian and Other races include Latinas.

Source: Pennsylvania Department of Health, Bureau of Health Statistics and Research. Calculations prepared by PHMC.

**Table 2: Average Annualized Birth Rates for Adolescent Women 10-17 Years  
by Race and Ethnicity, 2005-2008**

	Service Area	Philadelphia County	Pennsylvania
	Rate (Number)	Rate (Number)	Rate (Number)
Total	22.7 (711)	17.1 (1,361)	6.9 (4,427)
White	8.7 (52)	5.2 (128)	3.7 (1,900)
Black	22.1 (401)	20.5 (891)	19.8 (1,653)
Asian	9.7 (10)	6.3 (23)	3.0 (42)
Other	30.5 (189)	28.7 (237)	19.0 (604)
Latina	31.7 (255)	31.5 (319)	25.5 (935)
Non-Latina	18.8 (436)	14.2 (990)	5.6 (3,400)

Notes:

The birth rate is calculated per 1,000 women 10-17 years of age.

White, Black, Asian and Other races include Latinas.

Source: Pennsylvania Department of Health, Bureau of Health Statistics and Research. Calculations prepared by PHMC.

**Table 3: Average Annualized Percentage of Infants Born at Low Birth Weight by Race and Ethnicity, 2005-2008**

	Service Area	Philadelphia County	Pennsylvania
	Percent (Number)	Percent (Number)	Percent (Number)
Total	12.5 (1,083)	11.3 (2,595)	8.3 (12,022)
White	9.8 (109)	7.7 (469)	7.1 (7,552)
Black	14.7 (681)	14.2 (1,594)	13.6 (2,918)
Asian	8.1 (24)	7.7 (109)	8.0 (424)
Other	10.6 (209)	10.1 (307)	9.0 (795)
Latino/a	10.0 (255)	9.5 (361)	8.7 (1,142)
Non-Latino/a	13.5 (796)	11.6 (2,126)	8.2 (10,648)

Notes:

Low birth weight is defined as an infant weighing less than 2500 grams (5.5 lbs.) at birth.

White, Black, Asian and Other races include Latino/as.

Source: Pennsylvania Department of Health, Bureau of Health Statistics and Research. Calculations prepared by PHMC.

**Table 4: Average Annualized Infant Mortality Rate by Race and Ethnicity, 2005-2008**

	Service Area	Philadelphia County	Pennsylvania
	Rate (Number)	Rate (Number)	Rate (Number)
Total	11.6 (100)	12.2 (279)	7.5 (1,090)
White	27.2 (30)	11.6 (71)	6.4 (681)
Black	13.5 (63)	16.1 (181)	16.2 (348)
Asian	ND	ND	4.3 (23)
Other	ND	ND	ND
Latino/a	8.5 (22)	8.9 (34)	7.0 (92)
Non-Latino/a	13.1 (77)	13.0 (238)	7.6 (985)

Notes:

Infant mortality is defined as the death of an infant within the first year of birth and is calculated per 1,000 live infant births.

White, Black, Asian and Other races include Latino/as.

ND=Not Displayed. Rates are not calculated and displayed when the count is less than 10.

Source: Pennsylvania Department of Health, Bureau of Health Statistics and Research. Calculations prepared by PHMC.
